**Describe a challenging problem you encountered during a software development project and how you solved it.**

**Example Answer:** During a recent software development project we encountered a performance bottleneck in the application where certain operations were taking longer than expected to execute. After conducting profiling and performance analysis we identified that the bottleneck was caused by inefficient database queries. To address this issue we optimized the database queries by adding appropriate indexes, rewriting complex queries, and caching frequently accessed data. As a result we were able to significantly improve the performance of the application and eliminate the bottleneck.
