Use of Word Embedding to Generate Similar Words and Misspellings for Training Purpose in Chatbot Development Sanjay Thapa,2020 The advancement in the field of Natural Language Processing and Machine Learning has played a significant role in the huge improvement of conversational Artificial Intelligence AI The use of text based conversation AI such as chatbots have increased significantly for the everyday purpose to communicate with real people for a variety of tasks Chatbots are deployed in almost all popular messaging platforms and channels The rise of chatbot development frameworks based on machine learning is helping to deploy chatbot easily and promptly These chatbot development frameworks use machine learning and natural language understanding NLU to understand users messages and intents and respond accordingly to users utterance Since most of the chatbots are developed for domain specific purposes the performance of the chatbot is directly related to the training data To increase the domain knowledge and knowledge base of the chatbots via training data the chatbots need to know similar words or phrases for a users message Furthermore it is not guaranteed that a user will spell a word correctly A lot of times in written conversation a user will misspell at least some words Thus to include semantically similar words and misspellings in the training data I have used word embedding to generate misspellings and similar words These generated similar words and misspellings will be used as training data to train the model for chatbot development
