

Introduction

History of Economic Thought

The subject, the History of Economic Thought, may be defined as a critical account of the development of economic ideas, searching into their origins, interrelations, and, in some cases, their results. The history of economic thought concerns thinkers and theories in the field of political economy and economics from the ancient world right up to the present day. Economics was not considered a separate discipline until the nineteenth century. For example, Aristotle, the ancient Greek philosopher, in his works on politics and ethics have thought of 'art of wealth acquisition'. He also considered the question whether property is best left in private or public hands. In medieval times, scholars like Thomas Aquinas argued that it was a moral obligation of businesses to sell goods at a just price. Economic thought evolved through feudalism in the Middle Ages to mercantilist theory during the Renaissance (when people were concerned to orient trade policy to further the national interest). The modern political economy of Adam Smith appeared during the industrial revolution, when technological advancement, global exploration, and material opulence that had previously been unimaginable was becoming a reality. All these and further developments are subject matter of history of economic thought. Changes in economic thought have always accompanied changes in the economy, just as changes in economic thought can propel change in economic policy. Economic thought has at times focused on the aspects of human nature such as greed and selfishness that generally work against the good of all; at other times, economic behaviour has been seen as self-regulating and working toward a common purpose. As contemporary economic thought deals with the issues of globalization and the emergence of a global economy, economists have turned to the multitude of other disciplines which, like economics, developed independently. Building on their discoveries, and united with them in pursuit of the common goal of benefiting human society, economic thought may be on the road to achieving a new level of understanding.

There are several ways to present the history of economic thought. (i) to analyse the changing nature of economic theory in conjunction with the social and economic development of society (ii) to emphasize economic thinking as part of the main currents of philosophical and political ideas (iii) to emphasize the internal dynamics of the science where new insights and results emerge as a consequence of economists' awareness of the shortcomings of the present state of the subject.

Economic History

Economic history is different from history of economic thought. Economic history is the study of the economic aspects of societies in the past; the history of the economic use of resources land, labour and capital; or the examination of the past performance of economies. It is concerned with how people lived most of their lives, how many were born and died, how they earned and spent, worked and played. Such variants, however, reveal little more than the definition which once said simply that it was the sort of history which required a knowledge of economics; though they are an advance on that which defined an economic historian as one who wrote as little history as possible for as much money as possible.

Economic history asks economic questions – be they about the demand and supply of goods and services, about costs of production, levels of income, the distribution of wealth, the volume and direction of investment, or the structure of overseas trade – it inevitably deals with large numbers, with aggregates. A study of economic history is important because the historical economic phenomena to be examined in any given period have no existence independent of the social, political, cultural, religious and physical environment in which they occurred.

Thought Lionel Robbins, 2000-10-16 Lionel Robbins's now famous lectures on the history of economic thought comprise one of the greatest accounts since World War II of the evolution of economic ideas. This volume represents the first time those lectures have been published. Lord Robbins (1898-1984) was a remarkably accomplished thinker, writer, and public figure. He made important contributions to economic theory, methodology, and policy analysis; directed the economic section of Winston Churchill's War Cabinet; and served as chairman of the Financial Times. As a historian of economic ideas, he ranks with Joseph Schumpeter and Jacob Viner as one of the foremost scholars of the century. These lectures, delivered at the London School of Economics between 1979 and 1981 and tape-recorded by Robbins's grandson, display his mastery of the intellectual history of economics, his infectious enthusiasm for the subject, and his eloquence and incisive wit. They cover a broad chronological range, beginning with Plato, Aristotle, and Aquinas, focusing extensively on Adam Smith, Thomas Malthus, and the classicals, and finishing with a discussion of moderns and marginalists from Marx to Alfred Marshall. Robbins takes a varied and inclusive approach to intellectual history. As he says in his first lecture, "I shall go my own sweet way, sometimes talk about doctrine, sometimes talk about persons, sometimes talk about periods." The lectures are united by Robbins's conviction that it is impossible to understand adequately contemporary institutions and social sciences without understanding the ideas behind their development. Authoritative yet accessible, combining the immediacy of the spoken word with Robbins's exceptional talent for clear, well-organized exposition, this volume will be welcomed by anyone interested in the intellectual origins of the modern world.

Documents on Modern History of Economic Thought Warren J. Samuels, 2003-02-25. Contains seven documents from the history of economics: four sets of lecture notes taken by Victor E. Smith, two from courses given by William Jaffe at Northwestern University on general equilibrium theory and on Keynes from 1938-39, and one from lectures given at the University of Cambridge during 1954-55.

An Economic Philosophy of Production, Work and Consumption Rodney Edvinsson, 2022-08-01. An Economic Philosophy of Production, Work and Consumption presents a new transhistorical framework of defining production, work, and consumption. It shows that they all share the common feature of intentional physical transformation of something external to the agent at some point in time. The book opens with a discussion of various theoretical traditions within economics, spanning mainstream and heterodox perspectives, and problems with production definitions in use today. Next, the author outlines various definitions in a more formal manner and provides a discussion on measurement and the production boundary. Unproductive work is redefined as socially reproductive, i.e., such that it would not be performed on a Robinson Crusoe Island. Finally, the volume applies the new conceptual framework to various historical cases and discusses the future of production, work, and consumption. This essential volume will be of interest to scholars of economic philosophy and methodology, the history of economic thought, economic history, and national

Literacy Myths, Legacies, and Lessons Harvey J. Graff, 2017-07-05 In his latest writings on the history of literacy and its importance for present understanding and future rethinking, historian Harvey J. Graff continues his critical revisions of many commonly held ideas about literacy. The book speaks to central concerns about the place of literacy in modern and late modern culture and society and its complicated historical foundations. Drawing on other aspects of his research, Graff places the chapters that follow in the context of current thinking and major concerns about literacy and the development of both historical and interdisciplinary studies. Special emphasis falls upon the usefulness of the literacy myth as an important subject for interdisciplinary study and understanding. Critical stock-taking of the field includes reflections on Graff's own research and writings of the last three decades and the relationships that connect interdisciplinary rethinking and the literacy myth. The collection is noteworthy for its attention to Graff's reflections on his identification of the literacy myth and in developing Literacy Studies at OSU Ohio State University as a model for university-wide interdisciplinary programs. It also deals with ordinary concerns about literacy or illiteracy that are shared by academics and concerned citizens. These nontechnical essays will speak to both academic and nonacademic audiences across disciplines and cultural orientations

Economic Thought and Methodology Warren J. Samuels, Donald F. Koch, Jeff Biddle, 1987-10 Volume 25 C commences a series of class notes taken at Northwestern and Chicago during the period 1964-1967. The notes from courses at Northwestern are Robert Clower's course on economic theory and Frank Fetter's course on monetary institutions and policies. The notes from Chicago include George Stigler's course on industrial organization, Merton Miller's course on corporate finance, and Daniel Orr's course on the theory of the firm. Also included are Warren Samuels' notes from James Earley's courses on economic theory and on money, income, and price given at Wisconsin during 1954-1955, and Samuels' notes from a faculty seminar on myth, theology, and society given by Robert T. Anderson at Michigan State University in 1974. The series presents review essays, multiple reviews, and mini-symposia on new works in this field. Volumes are broad in scope. The series fills a substantial gap in this field.

Fundamentals of Cognitive Science Thomas Hardy Leahey, 2022-07-19. *Fundamentals of Cognitive Science* draws on research from psychology, philosophy, artificial intelligence, linguistics, evolution, and neuroscience to provide an engaging and student-friendly introduction to this interdisciplinary field. While structured around traditional cognitive psychology topics from attention, learning theory, and memory to information processing, thinking, and decision making, the book also looks at neural networks, cognitive neuroscience, embodied cognition, and magic to illustrate cognitive science principles. The book is organized around the history of thinking about the mind and its relation to the world. It considers the evolution of cognition and how it demonstrates how our current thinking about cognitive processes is derived from pre-scientific philosophies and common sense through psychologists' empirical inquiries into mind and behavior as they pursued a science of cognition and the construction of artificial intelligences. The architectures of cognition are also applied throughout, and the book proposes a synthesis of them from traditional symbol system architectures to recent work in embodied cognition and Bayesian predictive processing. Practical and policy implications are also considered, but solutions are left for the readers to determine. Using extended case studies to address the most important themes, ideas, and findings, this book is suitable for upper-level undergraduate and graduate courses in psychology and related fields. It is also suitable for general readers interested in an accessible treatment of cognitive science and its practical implications. Friction Is Fiction: the Future of Content, Media and Business (Black and White Edition) Gerd Leonhard, 2010-05-06. *Futurist and Thought Leader* Gerd Leonhard www.mediafuturist.com shares his thoughts on the Future of Content, Media, and Business. *Friction is Fiction* presents a constantly updated compilation of Gerd's best essays, writings, and most popular blog posts. The central meme is that the Internet has completely disrupted the traditional notion of generating higher income by simply taking advantage of possible friction points and hurdles within transactions or business processes, i.e. by controlling the people formerly known as consumers. The Future is all about winning the trust and turning attention into revenues.
