Optimal Control Epfl:

Control Systems Jitendra R. Raol, Ramakalyan Ayyagari, 2019-07-12 Control Systems Classical Modern and AI Based Approaches provides a broad and comprehensive study of the principles mathematics and applications for those studying basic control in mechanical electrical aerospace and other engineering disciplines The text builds a strong mathematical foundation of control theory of linear nonlinear optimal model predictive robust digital and adaptive control systems and it addresses applications in several emerging areas such as aircraft electro mechanical and some nonengineering systems DC motor control steel beam thickness control drum boiler motional control system chemical reactor head disk assembly pitch control of an aircraft yaw damper control helicopter control and tidal power control Decentralized control game theoretic control and control of hybrid systems are discussed Also control systems based on artificial neural networks fuzzy logic and genetic algorithms termed as AI based systems are studied and analyzed with applications such as auto landing aircraft industrial process control active suspension system fuzzy gain scheduling PID control and adaptive neuro control Numerical coverage with MATLAB is integrated and numerous examples and exercises are included for each chapter Associated MATLAB code will be made available *Practical Numerical and Scientific Computing with MATLAB® and Python* Eihab B. M. Bashier, 2020-03-18 Practical Numerical and Scientific Computing with MATLAB and Python concentrates on the practical aspects of numerical analysis and linear and non linear programming It discusses the methods for solving different types of mathematical problems using MATLAB and Python Although the book focuses on the approximation problem rather than on error analysis of mathematical problems it provides practical ways to calculate errors The book is divided into three parts covering topics in numerical linear algebra methods of interpolation numerical differentiation and integration solutions of differential equations linear and non linear programming problems and optimal control problems This book has the following advantages It adopts the programming languages MATLAB and Python which are widely used among academics scientists and engineers for ease of use and contain many libraries covering many scientific and engineering fields It contains topics that are rarely found in other numerical analysis books such as ill conditioned linear systems and methods of regularization to stabilize their solutions nonstandard finite differences methods for solutions of ordinary differential equations and the computations of the optimal controls It provides a practical explanation of how to apply these topics using MATLAB and Python It discusses software libraries to solve mathematical problems such as software Gekko pulp and pyomo These libraries use Python for solutions to differential equations and static and dynamic optimization problems Most programs in the book can be applied in versions prior to MATLAB 2017b and Python 3 7 4 without the need to modify these programs This book is aimed at newcomers and middle level students as well as members of the scientific community who are interested in solving math problems using MATLAB or Python

System Modeling and Optimization F. Ceragioli, A. Dontchev, H. Furuta, K. Marti, L. Pandolfi, 2006-03-27 This book presents selected proceedings from the 22nd biennial IFIP conference on

System Modeling and Optimization held in Turin Italy in July of 2005 This edition of the conference is dedicated to the achievements of Camillo Possio who was killed sixty years ago during the last air raid over Turin For more information about the 300 other books in the IFIP series please visit www.springeronline.com *Neuromechanics and Control of Physical Behavior: from Experimental and Computational Formulations to Bio-inspired Technologies* Massimo Sartori, Francisco J. Valero-Cuevas, Alfred C. Schouten, Matthew Tresch, Yoshihiko Nakamura, Manish Sreenivasa, 2019-08-15 The term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals Crucial to this approach is a detailed description and modeling of the interaction between the nervous system and the controlled biomechanical plant Only then do we have the broader context within which to understand evolution movement mechanics neural control energetics disability and rehabilitation In addition to enabling new basic science directions understanding the interrelations between movement neural and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals Similarly this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human like physical behavior and adaptation in real world environments This Research Topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus

Spectral and High Order Methods for Partial Differential Equations Jan S. Hesthaven, Einar M. Rønquist, 2010-10-29 The book contains a selection of high quality papers chosen among the best presentations during the International Conference on Spectral and High Order Methods 2009 and provides an overview of the depth and breadth of the activities within this important research area The carefully reviewed selection of the papers will provide the reader with a snapshot of state of the art and help initiate new research directions through the extensive bibliography

Proceedings of the Eleventh International Symposium on Applied Electromagnetics and Mechanics, ISEM-Versailles A. Bossavit, Dominique Lesselier, A. Razek, 2004 This publication contains a selection of 124 papers among the 165 full length contributions which were submitted on site at ISEM 2003 The objective of the symposia series is to vigorously promote the research in the field of electro mechanical systems The reader will we hope appreciate the variety of topics that were addressed This is what makes ISEM so stimulating for whoever is interested in the applications of electromagnetics and its opening toward many technical fields Yet this publication does not intend to be a mosaic of sub disciplines but aims at their integration and synergy This will be demonstrated by the present selection
