*Aerodynamics for Engineering Students* Fifth Edition is the leading course text on aerodynamics. The book has been revised to include the latest developments in flow control and boundary layers and their influence on modern wing design as well as introducing recent advances in the understanding of fundamental fluid dynamics. Computational methods have been expanded and updated to reflect the modern approaches to aerodynamic design and research in the aeronautical industry and elsewhere and the structure of the text has been developed to reflect current course requirements. The book is designed to be accessible and practical. Theory is developed logically within each chapter with notation symbols and units well defined throughout and the text is fully illustrated with worked examples and exercises. The book recognizes the extensive use of computational techniques in contemporary aeronautical design. However it can be used as a stand alone text reflecting the needs of many courses in the field for a thorough grounding in the underlying principles of the subject. The book is an ideal resource for undergraduate and postgraduate students in aeronautical engineering. The classic text expanded and updated. Includes latest developments in flow control boundary layers and fluid dynamics. Fully illustrated throughout with illustrations worked examples and exercises.      *Road Vehicle Aerodynamics* A. J.
