The production of rubber and rubber products is a large and diverse industry. The rubber product manufacturing industry is basically divided into two major sectors: tyre and non tyre. The tyre sector produces all types of automotive and nonautomotive tyres, whereas the non tyre sector produces high technology and sophisticated products like conveyor belts, rubber seals, etc. The wide range of rubber products manufactured by the rubber industry comprises all types of heavy duty earth moving tyres, auto tyres, tubes, automobile parts, footwear, beltings, etc. The rubber industry has been growing tremendously over the years. The future of the rubber industry is tied to the global economy. Rapidly growing automotive sector in developing economies and increased demand for high performance tyres are expected to contribute to the growth of the global industrial rubber market. The current scenario reveals that there is a tremendous scope for the development of rubber processing industries. The global market for industrial rubber products is projected to increase 5.8% per year. Investment in rubber industry is expected to offer significant opportunities in the near future and realizing returns to investors willing to explore this sector. This book deals with all aspects of rubber processing: mixing, milling, extrusion, and molding; reclaiming and manufacturing process of rubber products. The major contents of the book are rubbers, materials and processing, mixing technology of rubber, techniques of vulcanization, rubber vulcanization, rubber compounding, rubber reclaiming, manufacture of rubber products, latex and foam rubber, silicone rubber, polybutadiene and polyisoprene, styrene butadiene rubber, natural rubber, etc. The book contains addresses of plant machinery suppliers with their photographs. It will be a standard reference book for professionals, entrepreneurs, those studying and researching in this important area, and others interested in the field of rubber processing technology.

Anticorrosive Rubber Lining Chellappa Chandrasekaran, 2017-05-23 Anticorrosive Rubber Lining discusses the state of the art in this evolving industry including sections on the best materials and formulations to use what's best for a particular application which repair technique is best for a given application how long a rubber lining is likely to last vulcanization parameters and more. This book deals with the important field of anticorrosive rubber lining and its applications in various industries including oil and gas nuclear aerospace maritime and many more highlighting many of the technological aspects involved. The author offers a unique perspective due to the exclusiveness of the case histories presented including many industrial rubber lining practices which are mostly kept within the industry. The technical information on rubber presented here is a practical tool to enable engineers to make the best use of rubber linings to prevent corrosion in chemical plants. The book includes valuable insights into bonding systems surface preparation and coating methodologies and also covers failure analysis of failed systems. Includes up to date technical information on special compounding and processing technology of recently developed synthetic rubbers. Provides detailed case studies from industry sectors including aerospace nuclear energy and mining. Presents rare valuable insider knowledge of current industry practice. **Rubber Technology** Maurice Morton, 2012-12-06 About ten years after the publication of the Second Edition 1973 it became apparent that it was time for an up date of this book. This was especially true in this case since the subject matter has traditionally dealt mainly with the structure properties and technology of the various elastomers used in industry and these are bound to undergo significant changes over the period of a decade. In revising the contents of this volume it was thought best to keep the original format. Hence the first five chapters discuss the same general subject matter as before. The chapters dealing with natural rubber and the synthetic elastomers are up dated and an entirely new chapter has been added on the thermoplastic elastomers which have of course grown tremendously in importance. Another innovation is the addition of a new chapter Miscellaneous Elastomers to take care of old elastomers e.g polysulfides which have decreased somewhat in importance as well as to introduce some of the newly developed synthetic rubbers which have not yet reached high production levels. The editor wishes to express his sincere appreciation to all the contributors without whose close cooperation this task would have been impossible. He would especially like to acknowledge the invaluable assistance of Dr Howard Stephens in the planning of this book and for his suggestion of suitable authors.

**Rubber Compounding Ingredients: Need, Theory and Innovation** C. Hepburn,1997 The objectives of rubber compounding may be essentially defined as providing optimised performance and processability generally at minimum cost by the incorporation of non rubber ingredients Optimised performance in this context refers not only to mechanical properties but also for example resistance to bacteria or particular chemicals In some applications a rubber may also need to be coloured or bonded to another material and further ingredients may be required For many years rubber compounding was largely empirical and frequently described as a black art Today it is practised predominantly on the basis of scientific principles elucidated over years of study and is still the subject of intensive research In this new report Claude Hepburn reviews the following range of compounding ingredients considering the range of materials available their particular actions and recent interesting advances Process and extender oils Process aids and surfactants Coupling agents and adhesion promoters Fire retardants bactericides and blowing agents colourants and odourants An additional indexed section containing several hundred abstracts from the Polymer Library provides many more examples of novel materials and their applications *Net.Journal Directory Vol. 1, Issue 2* Lawrence Krumenaker,1997-11
