As everyone knows today smartphones and tablets are more powerful than PCs. So it was very important for SAP to find a solution and it was SAP Fiori. One UX for all SAP Products. Fiori is based on a framework known as SAPUI5 which is built on top of HTML5 and is compatible with any device and any screen size. The first announcement from SAP about Fiori was in May 2013 with the first release of 25 transactional Fiori apps for the most common business functions such as self-services tasks which are known as ESS/MSS. Today there are more than 1140 true Fiori apps available in the Fiori library. The number of apps can partially supplement the previous GUI transactions. SAP offers three types of Fiori apps with different database requirements. A distinction is made between Transactional apps, Analytical apps, and Factsheets. Only Transactional apps can run on any database that supports SAP ERP. The other 2 types require SAP HANA as a database. Since 2013 Fiori has made great progress and will continue in the coming years.
