Excerpt from Theoretical Elements of Electrical Engineering The first part of the following volume originated from a series of University lectures which I once promised to deliver This part can to a certain extent be considered as an introduction to my work on Theory and Calculation of Alternating Current Phenomena leading up very gradually from the ordinary sine wave representation of the alternating current to the graphical representation by polar coordinates from there to rectangular components of polar vectors and ultimately to the symbolic representation by the complex quantity The present work is however broader in its scope in so far as it comprises the fundamental principles not only of alternating but also of direct currents The second part is a series of monographs of the more important electrical apparatus alternating as well as direct current It is in a certain respect supplementary to Alternating Current Phenomena While in the latter work I have presented the general principles of alternating current phenomena in the present volume I intended to give a specific discussion of the particular features of individual apparatus In consequence thereof this part of the book is somewhat less theoretical and more descriptive my intention being to present the most important electrical apparatus in all their characteristic features as regard to external and internal structure action under normal and abnormal conditions individually and in connection with other apparatus etc About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
