**Framework for Evaluation of System Impacts of Intermodal Terminals Using Commodity Flow Data** Chiranjivi Sarma Bhamidipati, Michael J. Demetsky, 2008 With the challenges attributable to increasing freight traffic and roadway congestion it is necessary to investigate opportunities for better management of goods movements Rail truck intermodal freight transportation can be considered as one such solution for reducing long haul truck traffic on highways For the rail truck intermodal freight transportation to act as an effective transportation alternative it is necessary to evaluate its impacts on the transportation system A framework for evaluation of rail truck intermodal terminal projects with qualitative and quantitative measures has been established using public goals and private stakeholder perspective With the use of a case study some of these measures have been evaluated Recommendations have also made on data collection procedures for making a full scale evaluation The case study selected for the Project is the proposed freight intermodal terminal at Petersburg Virginia conceived by the Norfolk Southern Corporation This analysis formed a bridge between a region and a corridor based analysis

The key findings of the study are as follows a Evaluation of an intermodal terminal project requires a systematic multi regional modeling approach b The impacts of an intermodal terminal are region and trade corridor specific and c In cases where estimated intermodal rail drayage forms a small share of the overall truck traffic the introduction of an intermodal terminal does not have substantial impacts on accessibility mobility or safety The study successfully developed models for estimation of impacts including a two stage accessibility model for drayage a truck rail mode choice model truck involved crash models and secondary local freight traffic impact model mainly using data from the Commonwealth of Virginia
