Pattern Recognition and Classification Geoff Dougherty, 2012-10-28 The use of pattern recognition and classification is fundamental to many of the automated electronic systems in use today However despite the existence of a number of notable books in the field the subject remains very challenging especially for the

beginner Pattern Recognition and Classification presents a comprehensive introduction to the core concepts involved in automated pattern recognition. It is designed to be accessible to newcomers from varied backgrounds but it will also be useful to researchers and professionals in image and signal processing and analysis and in computer vision. Fundamental concepts of supervised and unsupervised classification are presented in an informal rather than axiomatic treatment so that the reader can quickly acquire the necessary background for applying the concepts to real problems. More advanced topics such as semi-supervised classification combining clustering algorithms and relevance feedback are addressed in the later chapters. This book is suitable for undergraduates and graduates studying pattern recognition and machine learning.
