Engineering Cybernetics, 1968 **Engineering Cybernetics**, 1967 **Fundamentals of Engineering Cybernetics** Eduard Aleksandrovich IĭAĭkubaĭtis, 1965 *Agricultural Cybernetics* Yanbo Huang, Qin Zhang, 2021-08-17

Agricultural systems are uniquely complex systems given that agricultural systems are parts of natural and ecological systems. Those aspects bring in a substantial degree of uncertainty in system operation. Also, impact factors such as weather factors are critical in agricultural systems but these factors are uncontrollable in system management. Modern agriculture has been evolving through precision agriculture beginning in the late 1980s and biotechnological innovations in the early 2000s. Precision agriculture implements site specific crop production management by integrating agricultural mechanization and information technology in geographic information system GIS, global navigation satellite system GNSS, and remote sensing. Now precision agriculture is set to evolve into smart agriculture with advanced systematization, informatization, intelligence, and automation. From precision agriculture to smart agriculture, there is a substantial amount of specific control and communication problems that have been investigated and will continue to be studied. In this book, the core ideas and methods from control problems in agricultural production systems are extracted, and a system view of agricultural production is formulated for the analysis and design of management strategies to control and optimize agricultural production systems while exploiting the intrinsic feedback information exchanging mechanisms. On this basis, the theoretical framework of agricultural cybernetics is established to predict and control the behavior of agricultural production systems through control theory.

Engineering Cybernetics Hsue Shen Tsien, Xuesen Qian, 1954 **Design of Embedded Control Systems** Marian Andrzej Adamski, Andrei Karatkevich, Marek Wegrzyn, 2006-11-22. A set of original results in the field of high-level design of logical control devices and systems is presented in this book. These concern different aspects of such important and long-term design problems, including the following, which seem to be the main ones: First, the behavior of a device under design must be described properly, and some adequate formal language should be chosen for that. Second, effective algorithms should be used for checking the prepared description for correctness for its syntactic and semantic veri-
