Failure to Thrive in Constructivism Marilyn Dahl,2011-01-01 Western educators constantly look for ways to make the process of learning more meaningful to kindle the spark that initiates a lifelong pursuit of knowledge and creative innovation Recent theories have favored the development of critical learning skills over the acquisition of facts However these theories are rooted in Western democratic and egalitarian assumptions some of which exist in no other culture on earth Although it seems logical that any learner set at liberty to explore the world would naturally develop the ability to think critically and analytically it is important to point out that Western logic is not universal and what seems natural is in fact a product of the Western independence oriented worldview This book examines the consequences of taking a full blown constructivist approach into Arabic tertiary education and uncovers some interesting hidden factors that prevent cognitive progress in this environment This seemingly natural approach to learning does not in fact come naturally but requires careful preparation to enable learners to accept cognitive experiences that may be culturally uncomfortable
