#### **INSTRUCTOR'S RESOURCES**

##### **Overview**

This chapter begins with a thorough discussion of interest rates, yield curves, and their relationship to required returns. Features of the major types of bond issues are presented along with their legal issues, risk characteristics, and indenture covenants. The chapter then introduces students to the important concept of valuation and demonstrates the impact of cash flows, timing, and risk on value. **The Dirac Equation and its Solutions** Vladislav G. Bagrov, Dmitry Gitman, 2014-08-20 The Dirac equation is of fundamental importance for relativistic quantum mechanics and quantum electrodynamics In relativistic quantum mechanics the Dirac equation is referred to as one particle wave equation of motion for electron in an external electromagnetic field In quantum electrodynamics exact solutions of this equation are needed to treat the interaction between the electron and the external field exactly In this monograph all propagators of a particle i e the various Green s functions are constructed in a certain way by using exact solutions of the Dirac equation

*Quantum Electrodynamics* Efim Samoïlovich Fradkin, D. M. Gitman, Shmari Mordkovich Shvartman, 1991 This book contains a systematic analysis of the formalisms of quantum electro dynamics in the presence of an intense external field able to create pairs from the vacuum and thereby violate the stability of the latter The approach developed is not specific to quantum electrodynamics and can equally well be applied to any quantum field theory with an unstable vacuum It should be noted that only macroscopic external fields are considered whereas problems associated with the superstrong Coulomb micro field are not treated As a rule the discussion is confined to those details of the formalism and calculations that are specific to the instability property

For instance renormalization is not discussed here since in practical calculations it is carried out according to standard methods. The presentation is based mainly on original research undertaken by the authors. Chapter 1 contains a general introduction to the problem. It also presents some standard information on quantum electrodynamics which will be used later in the text. In addition an interpretation of the concept of an external field is given and the problems that arise when one tries to keep the interaction with the external field exactly are discussed. In Chapter 2 the perturbation expansion in powers of the radiative interaction is developed for the matrix elements of transition processes taking the arbitrary external field into account exactly.
