areas and has been involved with emerging technologies for over a decade Having made the assertion that there is no acceptable text for teaching a course to introduce biotechnology to both scientists and engineers the author committed himself to resolving the issue by writing his own The book is of interest to a wide audience because it includes the necessary background for understanding how a technology works Engineering principles are addressed but in such a way that an instructor can skip the sections without hurting course content The author has been involved with many biotechnologies through his own direct research experiences The text is more than a compendium of information it is an integrated work written by an author who has experienced first hand the nuances associated with many of the major biotechnologies of general interest today
