An Introduction to Modern Astrophysics Bradley W. Carroll, Dale A. Ostlie, 2017-09-07 A comprehensive and engaging textbook covering the entire astrophysics curriculum in one volume

Relativity Wolfgang Rindler, 2006-04-07 Relativistic cosmology has in recent years become one of the most active and exciting branches of research often considered to be today where particle physics was forty years ago with major discoveries just waiting to happen Consequently the part most affected by this second edition is the last part on cosmology But there are additions improvements and new exercises throughout _ The book s basic purpose is unchanged It is to make relativity come alive conceptually and to display the grand theoretical edifice that it is with consequences in many branches of physics The emphasis is on the foundations on the logical subtleties and on presenting the necessary mathematics including differential geometry and tensors but always as late and in as palatable a form as possible Aided by over 300 exercises the book seeks to promote an in depth understanding and the confidence to tackle any basic problem in relativity

Theory Sergei M. Kopeikin, 2014-10-10 Relativistic celestial mechanics investigating the motion celestial bodies under the influence of general relativity is a major tool of modern experimental gravitational physics With a wide range of prominent authors from the field this two volume series consists of reviews on a multitude of advanced topics in the area of relativistic celestial mechanics starting from more classical topics such as the regime of asymptotically flat spacetime light propagation and celestial ephemerides but also including its role in cosmology and alternative theories of gravity as well as modern experiments in this area This first volume of a two volume series is concerned with theoretical foundations such as post Newtonian solutions to the two body problem light propagation through time dependent gravitational fields as well as cosmological effects on the movement of bodies in the solar systems On the occasion of his 80 th birthday these two volumes honor V A Brumberg one of the pioneers in modern relativistic celestial mechanics Contributions include M Soffel On the DSX framework T Damour The general relativistic two body problem G Schaefer Hamiltonian dynamics of spinning compact binaries through high post Newtonian approximations A Petrov and S Kopeikin Post Newtonian approximations in cosmology T Futamase On the backreaction problem in cosmology Y Xie and S Kopeikin Covariant theory of the post Newtonian equations of motion of extended bodies S Kopeikin and P Korobkov General relativistic theory of light propagation in multipolar gravitational fields
