Excerpt from *The Art of Paper Making: A Practical Handbook of the Manufacture of Paper From Rags, Esparto, Straw and Other Fibrous Materials Including the Manufacture of Pulp From Wood Fibre*. In the present volume while

describing the various operations involved in the manufacture of paper the Author has endeavoured to render the work serviceable as a book of reference in respect to the processes and improvement which have from time been introduced and many of which have been more or less practically applied either at home or abroad The recovery of soda from waste liquors has been fully dealt with and the details of several applied processes explained Special attention has also been directed to some of the more important methods of producing pulp from wood fibre since it is highly probable that from this inexhaustible source the paper maker will ultimately derive much of the cellulose used in his manufacture Indeed it may be deemed equally probable when the processes for disintegrating wood fibre so largely applied in America and on the Continent become better understood in this country that their adoption here will become more extensive than has hitherto been the case About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
