Shang,Xiaofei Li,2022-05-11 It has been more than 140 years since water was used to generate electricity Especially since the 1970s with the advancement of science and technology new technologies new processes and new materials have been widely used in hydropower construction Engineering equipment and technology as well as cascade development have become increasingly mature making possible the construction of many high dams and large reservoirs in the world However with the passage of time hydropower infrastructure such as reservoirs dams and power stations built in large numbers in the past are aging This coupled with singular use of hydropower limits the development of hydropower in the future This book reports the achievements in hydropower construction and the efforts of sustainable hydropower development made by various countries around the globe These existing innovative studies and applications stimulate new ideas for the renewal of hydropower infrastructure and the further improvement of hydropower development and utilization efficiency

Mini Hydropower for Rural Development Thomas Meier,2001 Rural electrification enjoys high priority on Indonesia s development agenda In remote villages located beyond the reach of national electricity grids mini hydropower offers an environmentally friendly alternative to decentralized electricity generation Technical assistance programs have successfully introduced mini hydro technology in developing countries but have often failed to attain sustainable plant operation This book provides insight into the multifaceted conditions under which village communities are struggling to keep systems running A new approach linking productive electricity use and mini hydro operation is developed which incorporates experiences of market oriented approaches in small enterprise development Village communities are no longer left alone after the commissioning of the plants but are continuously provided need oriented services The study is exceptional in that the approach is experimentally applied in an actual project involving a village owned coffee roastery It is shown that the new approach not only contributes to a sustainable electricity supply but also to village development
