General Technical Report WO, 2005 **Variable Selection Methods in Multiple Linear Regression** Tsung-Sheng Hu, 1993 Computing Science and Statistics Connie Page, Raoul LePage, 2012-12-06

Interface 90 is the continuation of an extremely successful symposium series. The series has provided a forum for the interaction of professionals in statistics, computing science, and in numerical methods wherein they may discuss a wide range of topics at the interface of these disciplines. This is the 22nd Symposium on the Interface Computing Science and Statistics, held 16-19 May 1990 at the Kellogg Center on the campus of Michigan State University and is the third Symposium to be held under the recently organized Interface Foundation of North America. The Interface Board of Directors consists of the nine most recent Symposium Chairs: James E. Gentle, Lynne Billard, David M. Allen, Thomas J. Boardman, Richard M. Heiberger, Edward J. Wegman, Linda Malone, Raoul LePage, and Jon Kettenring. The officers of the Interface are William Eddy, Board Chairman and Executive Director, Edward Wegman, President and Treasurer, Lynne Billard, Secretary. My valued colleague, Connie Page, Editor of this Proceedings Volume, and generally a bright and hardworking person with organizational skills of a higher order, which were successfully brought into play during many critical junctures not strictly connected with the Proceedings. Edward Wegman, Barbara Barringer, Bill Eddy, and George Styan all pitched in with useful information on numerous occasions. Our Keynote Speaker, Peter G. Hall, and Plenary Speakers, David L. Donoho, Jerome H. Friedman, who also gave a short course, Bruce Hajek, John Skilling, and C. F. *A Comparison of Variable Selection Criteria for Multiple Linear Regression: A Second Simulation Study*, David P. Woollard, 1993. This thesis implements a variable selection method proposed by Alan J. Miller and makes an extension of Ross J. Hansen's 1988 thesis research by comparing the methods he examined: Minimum MSE, Minimum S_p , and Minimum C_p with Miller's method. Response Surface methodology is employed with two performance measures: the percentage of correct variables in a model and the Theoretical Mean Squared Error of Prediction (TMSEP). Each technique is applied on generated data with known multicollinearities, variances, random predictors, and sample sizes. Both performance measures are computed for models selected under each technique. A full factorial design using each performance measure is set up to study the effectiveness of each variable selection technique with respect to the known data characteristics. Equations are generated which relate these data characteristics to each combination of performance measure and selection method. A graphical analysis of variance is performed to summarize each technique's performance. Miller's method is shown to be the best overall technique for selecting models with the highest percentage of correct variables. Minimum MSE followed closely by Minimum S_p selected models with the least TMSEP. Statistics Regression analysis, Least squares method, Subset selection. Data Mining Using SAS Enterprise Miner, Randall Matignon, 2007-08-03. The most thorough and up-to-date introduction to data mining techniques using SAS Enterprise Miner. The Sample Explore, Modify Model, and Assess SEMMA methodology of SAS Enterprise Miner is an extremely valuable analytical tool for making critical business and marketing

decisions Until now there has been no single authoritative book that explores every node relationship and pattern that is a part of the Enterprise Miner software with regard to SEMMA design and data mining analysis Data Mining Using SAS Enterprise Miner introduces readers to a wide variety of data mining techniques and explains the purpose of and reasoning behind every node that is a part of the Enterprise Miner software Each chapter begins with a short introduction to the assortment of statistics that is generated from the various nodes in SAS Enterprise Miner v4 3 followed by detailed explanations of configuration settings that are located within each node Features of the book include The exploration of node relationships and patterns using data from an assortment of computations charts and graphs commonly used in SAS procedures A step by step approach to each node discussion along with an assortment of illustrations that acquaint the reader with the SAS Enterprise Miner working environment Descriptive detail of the powerful Score node and associated SAS code which showcases the important of managing editing executing and creating custom designed Score code for the benefit of fair and comprehensive business decision making Complete coverage of the wide variety of statistical techniques that can be performed using the SEMMA nodes An accompanying Web site that provides downloadable Score code training code and data sets for further implementation manipulation and interpretation as well as SAS IML software programming code This book is a well crafted study guide on the various methods employed to randomly sample partition graph transform filter impute replace cluster and process data as well as interactively group and iteratively process data while performing a wide variety of modeling techniques within the process flow of the SAS Enterprise Miner software Data Mining Using SAS Enterprise Miner is suitable as a supplemental text for advanced undergraduate and graduate students of statistics and computer science and is also an invaluable all encompassing guide to data mining for novice statisticians and experts alike
