Specifications Adrian Ioannou,2012-12-06 The industrial application of robots is growing steadily This is reflected in the number of manufacturers now involved in the field of robotics Thanks to pioneers such as Joseph Engelberger of Unimation Inc industry has seen their rapid deployment in all areas of manufacturing Manufacturers of robots and robotic equipment have increased their production levels and at the same time have made great efforts to improve and adapt their products to allow them to be used for a wider range of applications The demand for ever more sophisticated robotic devices has made the choice of robot for a particular application an extremely hard one Industrial Robot Specifications has been compiled to enable users to assess robotics in the context of their own needs The book contains detailed information on over 300 robots manufactured and distributed under licence throughout Europe More than 90 companies are covered and details are given of their distributors and agents regional addresses and names of key contacts Information is provided on robots as diverse as simple teaching machines costing perhaps 1500 to those highly sophisticated computer controlled robot devices commonly found in flexible manufacturing systems costing tens of thousands of pounds each Introduction Industrial Robot

Collaborative robots cobots are a relatively new class of robots meant to be true collaborators with their human coworkers This is in comparison to standard industrial robots which due to safety considerations must be sequestered away in cages from humans to avoid injuring them Collaborative robots promise is in their ability to assist human workers in tasks thereby making the workers jobs more efficient enjoyable and comfortable However despite this promise and a great deal of technical capability cobots are not being utilized to their full potential In cases where they don't get placed in storage they frequently work independently away from any human coworkers much like standard robots but without the protective cages around them This is partly due to a discrepancy between the requirements of true collaborative interaction design and the skill sets

of the individuals who may be tasked with programming or designing their behaviors the design of truly collaborative robot interactions is a fundamentally different challenge than the automation of conventional robots incorporating aspects like resource dependencies task allocation motion design human ergonomics and more However many automation experts are familiar with traditional automation but not interaction design In contrast individuals like motion designers and animators may provide useful guidance on behaviors like gesture and motion but lack other skills that allow their applicable skills to translate easily to this domain The goal of this dissertation is to explore how to better support the effective adoption of cobots by developers Put another way how can we make it easier for developers accustomed to conventional robot programming or otherwise relevant domains to design behaviors and programs for true collaborative robot interactions that are beneficial safe and effective I propose that the answer to this question lies to some extent in the development of new tools and systems which combined with the right program and behavior representations as well as relevant feedback optimization verification and synthesis techniques These tools and systems can help developers by growing and translating their domain knowledge into the interactive robot domain while also improving and restructuring the programs they produce to better suit collaborative work I consider multiple aspects of cobot programming such as allocation ergonomics and motion Finally I conceptualize design and implement systems and tools meant to support these developer in each of these areas with the goal of empowering them to utilize collaborative robots more effectively Industrial Automation Systems and Integration - Product Data Representation and Exchange International Organization for Standardization,2000
