KEY WORDS Language, *Homo sapiens*, Human origins, Speech

ABSTRACT The evolution of anatomically modern humans is frequently linked to the development of complex, symbolically based language. Language, functioning as a system of cognition and communication, is suggested to be the key behavior in later human evolution that isolated modern humans from their ancestors. Alternatively, other researchers view complex language as a much earlier hominid capacity, unrelated to the origin of anatomically modern *Homo sapiens*. The validity of either perspective is contingent upon how language is defined and how it can be identified in the paleoanthropological record. In this analysis, language is defined as a system with external aspects relating to speech production and internal aspects involving cognition and symbolism. The hypothesis that complex language was instrumental in modern human origins is then tested using data from the paleontological and archaeological records on brain volume and structure, vocal tract form, faunal assemblage composition, intra-site diversification, burial treatment, ornamentation and art. No data are found to support linking the origin of modern humans with the origin of complex language. Specifically, there are no data suggesting any major qualitative changes in language abilities corresponding with the 200,000-100,000 BP dates for modern *Homo sapiens* origins proposed by single origin models or the 40,000-30,000 BP period proposed as the time for the appearance of modern *Homo sapiens* in Western Europe. Instead, there appears to be archaeological and paleontological evidence for complex language capabilities beginning much earlier, with the evolution of the genus *Homo*.

The evolution of language and its role in defining human uniqueness has always been a central question of paleoanthropological research. If living humans can indeed be distinguished from other organisms by language, then the origin of the human language system is of critical importance. But when did this system of language evolve, and what was the impact of language on human evolution? Did language emerge early in hominid evolution, or was it a later development? Much recent discussion is on the role of language in the origin of modern *Homo sapiens* and the development of modern human biological and behavioral diversity (cf. Aiello and Dunbar, 1993; Arensburg et al., 1990; Bickerton, 1988, 1990; Cavalli-Sforza, 1989, 1991; Cavalli-Sforza et al., 1988; Davidson, 1991; Davidson and Noble, 1989; Dibble, 1989; Duchin, 1990; Foster, 1990; Furth, 1991; Gibson, 1991; Houghton, 1993; Kendon, 1991; Klein, 1990, 1991; Koch, 1990; Lieberman, 1989, 1991, 1992a,b, 1993; Lieberman et al., 1992; Lindly and Clark, 1990; McCrone, 1991; Noble and Davidson, 1991; Renfrew, 1987; Snowdon, 1990; Tillier et al., 1992; Wind et al., 1992). The majority of these authors support the hypothesis that language, as it is structured today, developed late in human evolution and that it

Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible

The Cambridge Handbook of Consciousness Philip David Zelazo, Morris Moscovitch, Evan Thompson, 2007-05-14 The Cambridge Handbook of Consciousness is the first of its kind in the field and its appearance marks a unique time in the history of intellectual inquiry on the topic After decades during which consciousness was considered beyond the scope of legitimate scientific investigation consciousness re emerged as a popular focus of research towards the end of the last century and it has remained so for nearly 20 years There are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and by juxtaposing them provides a comprehensive survey of this exciting field An authoritative desk reference which will also be suitable as an advanced textbook

Human Origins Camilla Power, Morna Finnegan, Hilary Callan, 2016-12-01 Human Origins brings together new thinking by social anthropologists and other scholars on the evolution of human culture and society No other discipline has more relevant expertise to consider the emergence of humans as the symbolic species Yet social anthropologists have been conspicuously absent from debates about the origins of modern humans These contributions explore why that is and how social anthropology can shed light on early kinship and economic relations gender politics ritual cosmology ethnobiology medicine and the evolution of language

Yearbook of Physical Anthropology, 1993 The Evolution of Human Cleverness Richard Hallam, 2022-05-01 The Evolution of Human Cleverness presents a unique introduction to the way human cognitive abilities have evolved The book comprises a series of mini essays on distinct topics in which technical terms are simplified considering how humans made the long journey from our ape like ancestors to become capable of higher level reasoning and problem solving All the topics are cross linked allowing the reader to dip in and out but certain key concepts run through the underlying reasoning Chiefly these are adaptation and selection the distinction between ultimate and proximate causes of behaviour gene culture co evolution and domain general versus domain specific cognitive processes The book should help the reader draw lessons for the human species as a whole especially in view of the environmental threats to its own existence Entries have been carefully crafted to cut through scientific jargon providing bite sized and digestible chunks of knowledge making the topic accessible for students and lay readers alike The

The Lithic Assemblages of Qafzeh Cave Erella Hovers, 2009-06-09 This book presents the first comprehensive description of the lithic assemblages from Qafzeh Cave one of only two Middle Paleolithic sites in the Levant that has yielded multiple burials of early anatomically modern Homo sapiens AMHs The record from this region raises the question of possible long term temporal overlap between early AMHs and Neanderthals For this reason Qafzeh has long been one of the pivotal sites in debates on the origins of AMHs and in attempts to compare and contrast the two species adaptations and behavior Although the hominin fossils from the site were published years ago until now the associated archaeological assemblages were incompletely described often leading to conflicting interpretations This monograph includes a thorough technological analysis of the lithic assemblages incorporated in their geological and sedimentological contexts This description serves as a springboard for regional comparisons as well as a more general discussion about Middle Paleolithic behavior which is relevant to important and as yet unresolved questions on the origins of modern behavior patterns The volume includes a wide ranging and up to date bibliography that provides the middle range for discussing the ecological context and behavioral complexity of the Middle Paleolithic period and ends with some thought provoking conclusions about the dynamic human interactions that existed in the region during this time
