Introduction to Data Analysis with R for Forensic Scientists James Michael Curran, 2010-07-30 Statistical methods provide a logical coherent framework in which data from experimental science can be analyzed However many researchers lack the statistical skills or resources that would allow them to explore their data to its full potential Introduction to Data Analysis with R for Forensic Sciences minimizes theory and mathematics and focus **Learn R** Pedro J. Aphalo, 2024-04-26 Learning a computer language like R can be either frustrating fun or boring Having fun requires challenges that wake up the learner s curiosity but also provide an emotional reward for overcoming them The book is designed so that it includes smaller and bigger challenges in what I call playgrounds in the hope that all readers will enjoy their path to R fluency Fluency in the use of a language is a skill that is acquired through practice and exploration For students and professionals in the biological sciences humanities and many applied fields recognizing the parallels between R and natural languages should help them feel at home with R The approach I use is similar to that of a travel guide encouraging exploration and describing the available alternatives and how to reach them The intention is to guide the reader through the R landscape of 2024 and beyond What is new in the second edition Text expanded by more than 25% to include additional R features and gentler and more detailed explanations Contains 24 new diagrams and flowcharts seven new tables and revised text and code examples for clarity All three indexes were expanded and answers to 28 frequently asked questions added What will you find in this book Programming concepts explained as they apply to current R Emphasis on the role of abstractions in programming Few prescriptive rules mostly the author s preferences together with alternatives Presentation of the R language emphasizing the R way of doing things Tutoring for programming in the small using scripts for data analysis Explanation of the differences between R proper and extensions for data wrangling The grammar of graphics is described as a language for the construction of data visualisations Examples of data exchange between R and the foreign world using common file formats Coaching to become an independent R user capable of writing original scripts and solving future challenges **Analyzing Baseball Data with R, Second Edition** Max Marchi, Jim Albert, Benjamin S. Baumer, 2018-11-19 Analyzing Baseball Data with R Second Edition introduces R to sabermetricians baseball enthusiasts and students interested in exploring the richness of baseball data It equips you with the necessary skills and software tools to perform all the analysis steps from importing the data to transforming them into an appropriate format to visualizing the data via graphs to performing a statistical analysis The authors first present an overview of publicly available baseball datasets and a gentle introduction to the type of data structures and exploratory and data management capabilities of R They also cover the ggplot2 graphics functions and employ a tidyverse friendly workflow throughout Much of the book illustrates the use of R through popular sabermetrics topics including the Pythagorean formula runs expectancy catcher framing career trajectories simulation of games and seasons patterns of streaky behavior of players and launch angles and exit velocities All the datasets and R code used in the text are

available online New to the second edition are a systematic adoption of the tidyverse and incorporation of Statcast player tracking data made available by Baseball Savant All code from the first edition has been revised according to the principles of the tidyverse Tidyverse packages including dplyr ggplot2 tidyr purrr and broom are emphasized throughout the book Two entirely new chapters are made possible by the availability of Statcast data one explores the notion of catcher framing ability and the other uses launch angle and exit velocity to estimate the probability of a home run Through the book's various examples you will learn about modern sabermetrics and how to conduct your own baseball analyses Max Marchi is a Baseball Analytics Analyst for the Cleveland Indians He was a regular contributor to The Hardball Times and Baseball Prospectus websites and previously consulted for other MLB clubs Jim Albert is a Distinguished University Professor of statistics at Bowling Green State University He has authored or coauthored several books including Curve Ball and Visualizing Baseball and was the editor of the Journal of Quantitative Analysis of Sports Ben Baumer is an assistant professor of statistical data sciences at Smith College Previously a statistical analyst for the New York Mets he is a co author of The Sabermetric Revolution and Modern Data Science with R [Data Science with R for Psychologists and Healthcare Professionals](#) Christian Ryan, 2021-12-22 This introduction to R for students of psychology and health sciences aims to fast track the reader through some of the most difficult aspects of learning to do data analysis and statistics It demonstrates the benefits for reproducibility and reliability of using a programming language over commercial software packages such as SPSS The early chapters build at a gentle pace to give the reader confidence in moving from a point and click software environment to the more robust and reliable world of statistical coding This is a thoroughly modern and up to date approach using RStudio and the tidyverse A range of R packages relevant to psychological research are discussed in detail A great deal of research in the health sciences concerns questionnaire data which may require recoding aggregation and transformation before quantitative techniques and statistical analysis can be applied R offers many useful and transparent functions to process data and check psychometric properties These are illustrated in detail along with a wide range of tools R affords for data visualisation Many introductory statistics books for the health sciences rely on toy examples in contrast this book benefits from utilising open datasets from published psychological studies to both motivate and demonstrate the transition from data manipulation and analysis to published report R Markdown is becoming the preferred method for communicating in the open science community This book also covers the detail of how to integrate the use of R Markdown documents into the research workflow and how to use these in preparing manuscripts for publication adhering to the latest APA style guidelines **Multilevel Modeling Using R** W. Holmes Finch, Jocelyn E. Bolin, Ken Kelley, 2019-07-16 Like its bestselling predecessor Multilevel Modeling Using R Second Edition provides the reader with a helpful guide to conducting multilevel data modeling using the R software environment After reviewing standard linear models the authors present the basics of multilevel models and explain how to fit these models using R They then show how to employ multilevel modeling with longitudinal data and

demonstrate the valuable graphical options in R The book also describes models for categorical dependent variables in both single level and multilevel data New in the Second Edition Features the use of lmer instead of lme and including the most up to date approaches for obtaining confidence intervals for the model parameters Discusses measures of R2 the squared multiple correlation coefficient and overall model fit Adds a chapter on nonparametric and robust approaches to estimating multilevel models including rank based heavy tailed distributions and the multilevel lasso Includes a new chapter on multivariate multilevel models Presents new sections on micro macro models and multilevel generalized additive models This thoroughly updated revision gives the reader state of the art tools to launch their own investigations in multilevel modeling and gain insight into their research About the Authors W Holmes Finch is the George and Frances Ball Distinguished Professor of Educational Psychology at Ball State University Jocelyn E Bolin is a Professor in the Department of Educational Psychology at Ball State University Ken Kelley is the Edward F Sorin Society Professor of IT Analytics and Operations and the Associate Dean for Faculty and Research for the Mendoza College of Business at the University of Notre Dame
