

## Lecture 1: Biotechnology: A Brief Introduction

### Introduction

Plant, animal and microbes have been used by humans for nutrition and development of products for consumption such as beer or bread. Understanding of Physical phenomenon has allowed the invention of different types of electronic gadgets, machines, devices and altogether these have been used to increase the efficiency of human activities. Technological advancement has also allowed him to exploit plant, animal and microbial wealth to provide products of commercial or pharmaceutical importance. All these activities (research and development) fall under the big umbrella of biotechnology. In simpler word, Biotechnology is the summation of activities involving technological tools and living organism in such a way that it will enhance the efficiency of the production. The ultimate goal of this field is to improve the product yield from living organism either by employing principles of bio-engineering/bio-process technology or by genetically modifying the organisms. For example, production of bread or other bakery items from wheat flour after adding yeast as fermenting organism (**Figure 1.1**). In India, from ancient times wheat flour has been used to prepare “Roti” but yeast has been added to the wheat flour to make it porous by CO<sub>2</sub> generation during fermentation. Since then this process has been very popular in bakery industry and is responsible for preparation of bread, cakes, pizza, etc.

web atmega8 ready development board because of pin compatibility and internal architecture atmega8 can be used in arduino uno boards without any change but keep the flash and interrupts limitations in mind i designed some arduino uno clone boards i think they are perfect for atmega8

*rgb led controller using atmega328 electronics lab com* - Feb 27 2022

web rgb led consists of 3 separate leds red green blue packaged in a single case the rgb leds can emit different colors by mixing three basic colours we have used atmega328 microcontroller to generate 3 pwm signals by reading analog inputs

these analog inputs are connected to 3 potentiometers pwm outputs interfaced with gates of 3

**controlling rgb led colour using atmega16 projects tutorials** - Mar 31 2022

web may 28 2016 the color would be controlled using an atmega16 microcontroller rgb leds are basically the combination of the 3 leds red green and blue fused into a single package it consists of four pins totally out of which three of them for the three different colors the 4 th pin is common for all three colors and it s either cathode or anode
