The Inside Story of China's High-Tech Industry Yu Zhou,2008 In the 1980s China faced the monumental task of creating from scratch internationally competitive companies This challenge was especially daunting in the information and communications technology sector The Inside Story of China s High Tech Industry describes the emergence and growth of this industry through an analysis of China s leading science park Beijing s Zhongguancun Zhou argues that in the case of China it is the conjunction of export and domestic markets that has provided the main impetus to technological learning and the development of industry competitiveness This is the best treatment to date of China s most important innovation region

Paper Tigers, Hidden Dragons Douglas B. Fuller,2016-04-29 China presents us with a conundrum How has a developing country with a spectacularly inefficient financial system coupled with asset destroying state owned firms managed to create a number of vibrant high tech firms China s domestic financial system fails most private firms by neglecting to give them sufficient support to pursue technological upgrading even while smothering state favoured firms by providing them with too much support Due to their foreign financing multinational corporations suffer from neither insufficient funds nor soft budget constraints but they are insufficiently committed to China s development Hybrid firms that combine ethnic Chinese management and foreign financing are the hidden dragons driving China s technological development They avoid the maladies of China s domestic financial system while remaining committed to enhancing China s domestic technological capabilities In sad contrast China s domestic firms are technological paper tigers State efforts to build local innovation clusters and create national champions have not managed to transform these firms into drivers of technological development These findings upend fundamental debates about China s political economy Rather than a choice between state capitalism and building domestic market institutions China has fostered state capitalism even while tolerating the importing of foreign market institutions While the book s findings suggest that China s state and domestic market institutions are ineffective the hybrids promise an alternative way to avoid the middle income trap By documenting how variation in China s institutional terrain impacts technological development the book also provides much needed nuance to widespread yet mutually irreconcilable claims that China is either an emerging innovation power or a technological backwater Looking beyond China hybrid led development has implications for new alternative economic development models and new ways to conceptualize contemporary capitalism that go beyond current domestic institution centric approaches
