A Primer on Fluid Mechanics with Applications Sudhir Ranjan Jain, Bhooshan S. Paradkar, Shashikumar M. Chitre, 2023-01-01 This textbook is a pedagogic introduction to a number of phenomena employing fluid mechanics Beginning with basic concepts and conservation laws for neutral and charged fluids the authors apply and develop them to understand aerodynamics locomotion of micro organisms waves in air and water shock waves hydrodynamic and hydromagnetic instabilities stars and black holes blood flow in humans and superfluids The approach is to consider various striking topics on fluid mechanics without losing necessary mathematical rigor The book balances the qualitative explanations with formal treatment in a compact manner A special focus is given to the important and difficult subject of turbulence and the book ends with a discussion on turbulence in quantum fluids The textbook is dotted by a number of illustrative examples mostly from real life and exercises The textbook is designed for a one semester course and addresses students at undergraduate and graduate level in physics or engineering who want to research in the fields as diverse as aeronautics meteorology cosmology biomechanics and mathematical physics It is requested knowledge of an undergraduate level course on mathematical methods to better understand the topics presented here

Spectral Methods in Chemistry and Physics Bernard Shizgal, 2015-01-07 This book is a pedagogical presentation of the application of spectral and pseudospectral methods to kinetic theory and quantum mechanics There are additional applications to astrophysics engineering biology and many other fields The main objective of this book is to provide the basic concepts to enable the use of spectral and pseudospectral methods to solve problems in diverse fields of interest and to a wide audience While spectral methods are generally based on Fourier Series or Chebychev polynomials non classical polynomials and associated quadratures are used for many of the applications presented in the book Fourier series methods are summarized with a discussion of the resolution of the Gibbs phenomenon Classical and non classical quadratures are used for the evaluation of integrals in reaction dynamics including nuclear fusion radial integrals in density functional theory in elastic scattering theory and other applications The subject matter includes the calculation of transport coefficients in gases and other gas dynamical problems based on spectral and pseudospectral solutions of the Boltzmann equation Radiative transfer in astrophysics and atmospheric science and applications to space physics are discussed The relaxation of initial non equilibrium distributions to equilibrium for several different systems is studied with the Boltzmann and Fokker Planck equations The eigenvalue spectra of the linear operators in the Boltzmann Fokker Planck and Schr dinger equations are studied with spectral and pseudospectral methods based on

non classical orthogonal polynomials The numerical methods referred to as the Discrete Ordinate Method Differential Quadrature the Quadrature Discretization Method the Discrete Variable Representation the Lagrange Mesh Method and others are discussed and compared MATLAB codes are provided for most of the numerical results reported in the book see Link under Additional Information on the the right hand column *Quantum Mechanics Simulations* John R.
