Linear Programming and Economic Analysis Robert Dorfman, Paul A. Samuelson, Robert M. Solow, 2012-10-10 Designed primarily for economists and those interested in management economics who are not necessarily accomplished mathematicians this text offers a clear concise exposition of the relationship of linear programming to standard economic analysis The research and writing were supported by The RAND Corporation in the late 1950s Linear programming has been one of the most important postwar developments in economic theory but until publication of the present volume no text offered a comprehensive treatment of the many facets of the relationship of linear programming to traditional economic theory This book was the first to provide a wide ranging survey of such important aspects of the topic as the interrelations between the celebrated von Neumann theory of games and linear programming and the relationship between game theory and the traditional economic theories of duopoly and bilateral monopoly Modern economists will especially appreciate the treatment of the connection between linear programming and modern welfare economics and the insights that linear programming gives into the determinateness of Walrasian equilibrium The book also offers an excellent introduction to the important Leontief theory of input output as well as extensive treatment of the problems of dynamic linear programming Successfully used for three decades in graduate economics courses this book stresses practical problems and specifies important concrete applications

Industrial ecology IE is a rapidly growing scientific discipline that is concerned with the sustainability of industrial systems under explicit consideration of its interdependence with natural systems In recent years there has been an ever increasing awareness about the applicability of Input Output Analysis IOA to IE in particular to LCA life cycle assessment and MFA material flow analysis This is witnessed in the growing number of papers at ISIE International Society for Industrial Ecology conferences which use IOA and also by the installment of subject editors on IOA in the International Journal of Life Cycle Assessment It can be said that IE has become a major field of application for IOA The broadening of users of IOA from various backgrounds implies a need for a self contained textbook on IOA that can meet the needs of students and practitioners without compromising on basic concepts and the latest developments This book was written with the aim of filling this need and is primarily addressed to students and practitioners of IE As the title suggests the core contents of the book have grown out of our research in IOA of waste management issues over the last decade We have been fascinated by the versatile nature of IOA with regard to various technical issues of waste management in particular and to IE in general For us both economists by training IOA has turned out

Optimal tariffs with smuggling Johnson, Michael E., Dorosh, Paul A., 2015-12-25 Utilizing a spatial multi market model for rice in Nigeria that explicitly takes into account the potential for smuggling in this paper we analyze the welfare implications of alternative rice tariff rates given the government's goals of spurring domestic production and reducing imports Because smuggling occurs through the diversion of imports from Lagos the official port of entry in the south to the north our modeling framework also captures the spatial effects of higher tariffs on changes in rural and urban prices production and consumption the flow of trade in rice and welfare across different parts of the country Results show that tariff rates that exceed about 40 percent introduce some smuggling of rice through the north when smuggling becomes more profitable than importing through official channels in the south It is also at this tipping point that government tariff revenues are maximized At higher tariff rates with smuggling the south experiences greater welfare losses especially in urban areas

International Trade in Forest Products G. Cornelis van Kooten, Linda Voss, 2020-12-07 Because of the long standing Canada U S lumber trade dispute and the current pressure on the world's forests as a renewable energy source much attention has been directed toward the modelling of international trade in wood products Two types of trade models are described in this book one is rooted in economic theory and mathematical programming and the other consists of two econometric statistical models a gravity model rooted in theory and an approach known as GVAR that relies on time series analyses The purpose of the book is to provide the background theory behind models and facilitate readers in easily constructing their own models to analyse policy questions that they wish to address whether in forestry or some other sector Examples in the book are meant to illustrate how models can be used to say something about a variety of

issues including identification of the gains and losses to various players in the North American softwood lumber business and the potential for redirecting sales of lumber to countries outside the United States The discussion is expanded to include other products besides lumber and used to examine for example the effects of log export restrictions by one nation on all other forestry jurisdictions the impacts of climate policies as they relate to the global forest sector and the impact of oil prices on forest product markets throughout the world This book will appeal to practising economists and researchers who wish to examine various policies that affect international trade whether their interest is local or international in scope Because the book provides the theoretical bases underlying various models students and practitioners will find this a valuable reference book or supplementary textbook
