Chemistry and Industry ,2009 **ICIS Chemical Business** ,2008 Predicasts F & S Index Europe Annual ,1992 Chartered Mechanical Engineer ,1981 From Waste to Resource Elisabeth Lacoste,Philippe Chalmin,CYCLOPE (Firme).,2007 In the past humans regarded their resources as rare knowing that their demands outweighed supply Everything available had to be used and almost nothing went to waste However the Industrial Revolution embraced development and the seemingly unlimited use of renewable and nonrenewable resources Little by little though wastes were seen as pollutants that had to be discreetly collected hidden or buried in the most environmentally friendly way possible Each year the world produces as much waste as it does grain and steel The world survey detailed in this book offers the most complete picture to date of the global waste economy from collection through to recovery and recycling It analyzes

in depth three different methods of waste treatment recycling composting and waste treatment The authors deem it critical that changes in and the future of the waste management economy need to be viewed as part of the general issue of resource scarcity Through effective and efficient resource recovery global waste production offers the potential for equivalent amounts of energy and organic and secondary raw material resources
