

Foundation Engineering

- Structural Foundations are the substructure elements which transmit the structural load to the earth in such a way, that the supporting soil is not over-stressed and not undergo deformations that would cause excessive settlement of the structure.
- Hence the properties of the supporting soil must be expected to affect the choice of type of structural foundation suitable for the structure.
- The failure of foundation will be due to
 - (i) settlement of soil / foundation.
(It is called as settlement failure)
 - (ii) sliding / slipping of soil / foundation.
(It is called as shear failure)
- The foundation should be safe in shear criteria and settlement criteria.
