collecting insects with a sweep net or counting seagulls on a cliff face can hardly be expected to be as reliable or controllable as a laboratory based experiment Acknowledging the peculiarities of field based data and its interpretation this book provides a superb introduction to statistical analysis helping students relate to their particular and often diverse data with confidence and ease To enhance the usefulness of this book the new edition incorporates the more advanced method of multivariate analysis introducing the nature of multivariate problems and describing the techniques of principal components analysis cluster analysis and discriminant analysis which are all applied to biological examples An appendix detailing the statistical computing packages available has also been included It will be extremely useful to undergraduates studying ecology biology and earth and environmental sciences and of interest to postgraduates who are not familiar with the application of multivariate techniques and practising field biologists working in these areas

equivalence not the difference between levels being tested The last chapter deals with potential outlier or aberrant values and how to statistically determine if they should be removed from the sample data Each statistical test presented includes an example problem with the resultant software output and how to interpret the results Minimal time is spent on the mathematical calculations or theory For those interested in the associated equations supplemental figures are presented for each test with respective formulas In addition Appendix D presents the equations and proof for every output result for the various examples Examples and results from the appropriate statistical results are displayed using Minitab 18 In addition to the results the required steps to analyze data using Minitab are presented with the examples for those having access to this software Numerous other software packages are available including based data analysis with Excel
