Title: GitHub's Battle Against the Largest DDoS Attack

Introduction

GitHub, a platform where developers collaborate on projects, experienced an extraordinary event on Wednesday, February 28, 2018, at around 12:15 pm EST. A massive wave of traffic, 1.35 terabits per second, hit the website, marking the most powerful distributed denial of service (DDoS) attack ever recorded. Surprisingly, this attack did not require a botnet.

The Attack and Initial Response

A DDoS attack is like a digital traffic jam, where a website gets flooded with so much traffic that it can't handle it all, causing it to slow down or even stop working. In this case, GitHub faced a digital storm. For a few minutes, the website struggled with outages, but then it called for help from its DDoS mitigation service, Akamai Prolexic. Prolexic acted as a shield, routing all the traffic coming in and out of GitHub. It sent the data through special cleaning centers to separate and block the bad traffic from the good.

Comparing to Previous Attacks

The attack was significantly larger than a similar attack that happened in 2016 against an internet infrastructure company called Dyn. That attack reached 1.2 terabits per second and caused connectivity issues across the United States. However, this time, the good guys were prepared.

Defending Against the Attack

Akamai defended against the attack in several ways. In addition to Prolexic's general DDoS defense infrastructure, the company had also recently implemented specific defenses for a type of DDoS attack that comes from something called memcached servers. These servers are like digital librarians that help speed up networks and websites by remembering and quickly providing information. However, they're not supposed to be exposed on the public internet, where anyone can access them.

The Role of Memcached Servers

Unfortunately, about 100,000 memcached servers were exposed online without any protection. This meant that an attacker could access them and send them a special command, which the server would respond to with a much larger reply. This is like asking a librarian a simple question and getting a truckload of books in response!

Amplification Attacks

Unlike other DDoS attacks that use botnets (networks of infected computers) to flood websites with traffic, memcached DDoS attacks don't need a botnet. Instead, attackers just pretend to be their victim by using their victim's IP address and send small requests to multiple memcached

A Case for the Creation of the United States Department of Cybersecurity Christopher S. Brown,2021 All organizations have to address cybersecurity risks that may result in data theft or information systems from damage In most cases organizations are not prepared to adequately thwart cybersecurity threats and mitigate cyber incidents Properly addressing such threats would require specialized tools and skilled staff that understand how network technology works and best secure the technologies from unwanted breaches or harm Given the present day ubiquitous technology environment that often results in employees bringing their own devices into the work environment the organization s network technology is even more vulnerable to attacks This notion is not only present in the private sector but also the public sector all sectors need help The current cybersecurity framework is fractured and does not effectively address cybersecurity Furthermore cybersecurity includes protecting individuals online rights and the protection of personal data from theft Cybersecurity is a growing domain with increasing concerns that are proving to be too large to manage by the current national framework The recent SolarWinds supply chain attack illustrates the expansive range a cyber infiltration attack can reach This paper proposes the creation of the Department of Cybersecurity tasked to

organize and restructure the current framework that requires a drastic overhaul

Abstract **Cyber Risk, Intellectual Property Theft and Cyberwarfare** Ruth Taplin,2020-11-12 The desire to steal the intellectual property IP of others be they creative individuals or company teams working in patent pools to create new innovations remains the same Political methods have become more sophisticated in terms of devaluing the output of creative humans by creating open source access which can be taken freely by all and sundry What has changed is the new cyber based technology that allows increased theft of IP Likewise warfare for geo political imperatives is not new but sophisticated cyber based methods that can actually carry out infrastructural damage through cyberspace are new and are accordingly termed cyberwarfare How cyber strategies are used in IP theft and cyberwarfare in relation to new complex digital technology such as the Internet of Things IoT is explored in relation to particular essential sectors in the economy marine smart energy power grids and insurance Country specific studies based on either being the recipient or perpetrator or both of cyberattacks provide analysis in relation to Japan China and North Korea Russia Europe the UK in particular Iran and the USA

The Comprehensive Guide to Cybersecurity's Most Infamous Hacks Jason Edwards,2025-03-04 Understanding the evolving nature of cybersecurity threats has never been more important in a world increasingly reliant on digital technology *The Comprehensive Guide to Cybersecurity's Most Infamous Hacks* offers readers a guided journey through the history of cyberattacks examining key incidents that have defined and shaped modern cybersecurity This book dissects major cyber events and their impact from early hacking exploits like the Phreaking era to sophisticated breaches affecting corporations and governments Each chapter is dedicated to a specific type of cyberattack highlighting notorious breaches malware outbreaks and nation state operations These case studies are paired with a Lessons Learned section that offers readers insights into how these attacks were conducted what vulnerabilities were exploited and how the affected organizations responded While the incidents discussed are technical this book simplifies complex cyber topics to make them accessible to a broad audience whether you re a cybersecurity enthusiast a student or an industry professional

Real World Effects of Cyber-attacks Lucian Tipi,2016 [A Case Study of the Capital One Data Breach](#) Nelson Novaes Neto,2020 In an increasingly regulated world with companies prioritizing a big part of their budget for expenses with cyber security protections why have all of these protection initiatives and compliance standards not been enough to prevent the leak of billions of data points in recent years New data protection and privacy laws and recent cyber security regulations such as the General Data Protection Regulation GDPR that went into effect in Europe in 2018 demonstrate a strong trend and growing concern on how to protect businesses and customers from the significant increase in cyberattacks Does the flaw lie in the existing compliance requirements or in how companies manage their protections and enforce compliance controls The purpose of this research was to answer these questions by means of a technical assessment of the Capital One data breach incident one of the largest financial institutions in the U S This case study aims to understand the technical modus operandi of the attack map out exploited vulnerabilities and identify the related compliance

requirements that existed based on the National Institute of Standards and Technology NIST Cybersecurity Framework version 1.1 an agnostic framework widely used in the global industry to provide cyber threat mitigation guidelines The results of this research and the case study will help government entities regulatory agencies and companies to improve their cyber security controls for the protection of organizations and individuals
