managing and performing the stages of a system's life cycle. This is accomplished through the involvement of all interested parties with the ultimate goal of achieving customer satisfaction. This International Standard also provides processes that support the definition, control, and improvement of the life cycle processes used within an organization or a project. Organizations and projects can use these life cycle processes when acquiring and supplying systems. This International Standard concerns those systems that are man-made and may be configured with one or more of the following: hardware, software, data, humans, processes, e.g. processes for providing service to users, procedures, e.g. operator instructions, facilities, materials, and naturally occurring entities. When a system element is software, the software life cycle processes documented in ISO/IEC 12207:2008 may be used to implement that system element. The two standards are harmonized for concurrent use on a single project or in a single organization. When the system element is hardware, refer to other International Standards outside the scope of SC7.
