Principles Of Neurocomputing For Science Engineering:

Principles of Neurocomputing for Science and Engineering Frederic M. Ham, Ivica Kostanic, 2001 This exciting new text covers artificial neural networks but more specifically neurocomputing Neurocomputing is concerned with processing information which involves a learning process within an artificial neural network architecture This neural architecture responds to inputs according to a defined learning rule and then the trained network can be used to perform certain tasks depending on the application Neurocomputing can play an important role in solving certain problems such as pattern recognition optimization event classification control and identification of nonlinear systems and statistical analysis Principles of Neurocomputing for Science and Engineering unlike other neural networks texts is written specifically for scientists and engineers who want to apply neural networks to solve complex problems For each neurocomputing concept a solid mathematical foundation is presented along with illustrative examples to accompany that particular architecture and associated training algorithm The book is primarily intended for graduate level neural networks courses but in some instances may be used at the undergraduate level The book includes many detailed examples and an extensive set of end of chapter problems

Signal Processing for Remote Sensing C.H. Chen,2008 Continuing in the footsteps of the pioneering first edition *Signal and Image Processing for Remote Sensing* Second Edition explores the most up to date signal and image processing methods for dealing with remote sensing problems Although most data from satellites are in image form signal processing can contribute significantly in extracting information from remotely sensed waveforms or time series data This book combines both providing a unique balance between the role of signal processing and image processing Featuring contributions from worldwide experts this book continues to emphasize mathematical approaches Not limited to satellite data it also considers signals and images from hydroacoustic seismic microwave and other sensors Chapters cover important topics in signal and image processing and discuss techniques for dealing with remote sensing problems Each chapter offers an introduction to the topic before delving into research results making the book accessible to a broad audience This second edition reflects the considerable advances that have occurred in the field with 23 of 27 chapters being new or entirely

rewritten Coverage includes new mathematical developments such as compressive sensing empirical mode decomposition and sparse representation as well as new component analysis methods such as non negative matrix and tensor factorization The book also presents new experimental results on SAR and hyperspectral image processing The emphasis is on mathematical techniques that will far outlast the rapidly changing sensor software and hardware technologies Written for industrial and academic researchers and graduate students alike this book helps readers connect the dots in image and signal processing New in This Edition The second edition includes four chapters from the first edition plus 23 new or entirely rewritten chapters and 190 new figures New topics covered include Compressive sensing The mixed pixel problem with hyperspectral images Hyperspectral image HSI target detection and classification based on sparse representation An ISAR technique for refocusing moving targets in SAR images Empirical mode decomposition for signal processing Feature extraction for classification of remote sensing signals and images Active learning methods in classification of remote sensing images Signal subspace identification of hyperspectral data Wavelet based multi hyperspectral image restoration and fusion The second edition is not intended to replace the first edition entirely and readers are encouraged to read both editions of the book for a more complete picture of signal and image processing in remote sensing See Signal and Image Processing for Remote Sensing CRC Press 2006 **Business and Industry Symposium** Maurice Ades,Thong Hang,Larry M.

Koole,2026-01-01 There is much scientific literature on multimodal social interaction between human and or virtual agents and related multimodal synchrony analysis and behavioural adaptivity within the interaction such as affiliation and bonding However due to its strongly cyclical character complexity and adaptivity mathematical formalisation and computational simulation of it is a nontrivial topic Moreover the subjective agent oriented

perspective on synchrony analysis has not yet received much attention in the literature This book provides from an agent oriented perspective an overview of recent work on mathematical formalisation and computational simulation of multimodal interaction subjective multimodal synchrony analysis and related behavioural adaptivity underlying for example affiliation liking and bonding It does so by exploiting the possibilities of multi time scale multi adaptive multi level self modeling network models for agents to analyse and model these dynamic and adaptive processes formally In this way it contributes to the development of a solid basis for social interaction science
