Bridging the Seas Larrie D. Ferreiro,2020-01-21 How the introduction of steam iron and steel required

new rules and new ways of thinking for the design and building of ships In the 1800s shipbuilding moved from sail and wood to steam iron and steel The competitive pressure to achieve more predictable ocean transportation drove the industrialization of shipbuilding as shipowners demanded ships that enabled tighter scheduling improved performance and safe delivery of cargoes In *Bridging the Seas* naval historian Larrie Ferreiro describes this transformation of shipbuilding portraying the rise of a professionalized naval architecture as an integral part of the Industrial Age Picking up where his earlier book *Ships and Science* left off Ferreiro explains that the introduction of steam iron and steel required new rules and new ways of thinking for designing and building ships The characteristics of performance had to be first measured then theorized Ship theory led to the development of quantifiable standards that would ensure the safety and quality required by industry and governments and this in turn led to the professionalization of naval architecture as an engineering discipline Ferreiro describes among other things the technologies that allowed greater predictability in ship performance theoretical developments in naval architecture regarding motion speed and power propellers maneuvering and structural design the integration of theory into ship design and construction and the emergence of a laboratory infrastructure for research Updating the State-of-the Art in Civil Engineering Computing Tools Canadian Society for Civil Engineering,1988
