C. Barford,1967 "Music, Experiment and Mathematics in England, 1653?705 " Benjamin Wardhaugh,2017-07-05 How in 1705 was Thomas Salmon a parson from Bedfordshire able to persuade the Royal Society that a musical performance could constitute a scientific experiment Or that the judgement of a musical audience could provide evidence for a mathematically precise theory of musical tuning This book presents answers to these questions It constitutes a general history of quantitative music theory in the late seventeenth century as well as a detailed study of one part of that history namely the applications of mathematical and mechanical methods of understanding to music that were produced in England between 1653 and 1705 beginning with the responses to Descartes s 1650 Compendium music and ending with the Philosophical Transactions account of the appearance of Thomas Salmon at the Royal Society in 1705 The book is organized around four key questions Do musical pitches form a small set or a continuous spectrum Is there a single faculty of hearing which can account for musical sensation or is more than one faculty at work What is the role of harmony in the mechanical world and where can its effects be found And what is the relationship between musical theory and musical practice These are questions which are raised and discussed in the sources themselves and they have wide significance for early modern theories of knowledge and sensation more generally as well as providing a fascinating side light onto the world of the scientific revolution
