Cyber resilience - Defence-in-depth principles Alan Calder,2023-08-10 We live in a world where technology and vast quantities of data play a considerable role in everyday life both personal and professional For the foreseeable future and perhaps beyond the growth and prominence of data in business shows no signs of slowing down even if the technology in question will likely change in ways perhaps unimaginable today Naturally all this innovation brings huge opportunities and benefits to organisations and people alike However these come at more than just a financial cost In the world as we know it you can be attacked both physically and virtually For today's organisations which rely so heavily on technology particularly the Internet to do business the latter attack is the far more threatening of the two The cyber threat landscape is complex and constantly changing For every vulnerability fixed another pops up ripe for exploitation Worse when a vulnerability is identified a tool that can exploit it is often developed and used within hours faster than the time it normally takes for the vendor to release a patch and certainly quicker than the time many organisations take to install that patch This book has been divided into two parts Part 1 Security principles Part 2 Reference controls Part 1 is designed to give you a concise but solid grounding in the principles of good security covering key terms risk management different aspects of security defence

in depth implementation tips and more This part is best read from beginning to end Part 2 is intended as a useful reference discussing a wide range of good practice controls in alphabetical order you may want to consider implementing Each control is discussed at a high level focusing on the broader principles concepts and points to consider rather than specific solutions Each control has also been written as a stand alone chapter so you can just read the controls that interest you in an order that suits you
