**Appraisal of the role of environmental law in risk management in Nigeria** Matthias Okoro, 2014-10-01 Seminar paper from the year 2012 in the subject Environmental Sciences grade A University of Nigeria CENTER FOR ENVIRONMENTAL MANAGEMENT AND CONTROL course ENVIRONMENTAL MANAGEMENT AND CONTROL language English abstract In ideal risk management a prioritization process is followed whereby the risks with the greatest loss or impact and the greatest probability of occurring are handled first and risks with lower probability of occurrence and lower loss are handled in descending order In practice the process of assessing overall risk can be difficult and balancing resources used to mitigate between risks with a high probability of occurrence but lower loss versus a risk with high loss but lower probability of

occurrence can often be mishandled Intangible risk management identifies a new type of a risk that has a 100% probability of occurring but is ignored by Government or organization due to a lack of identification ability In Nigeria some time this is what is obtainable in the social and physical environment In view of the above fact environmental laws have been put in place to regulate every activity on the environment to manage the risk involved in these process and stage of development in other to avoid an impending or a looming catastrophe According to the International Network for Environmental Compliance and Enforcement INECE the major environmental issues in Nigeria are drought and flooding air pollution deforestation loss of biodiversity freshwater availability degradation of soil and vegetation and widespread poverty Government and other organizations hope to provide protection and mitigation regarding pollution and other disasters before their impacts contaminate the African environment as well as the global environment Therefore chronicled in this write up is the appraisal of the role of Environmental Law in risk management
