Svrcek,Donald P. Mahoney,Brent R. Young,2000-10-10 A hands on teaching and reference text for chemical engineers In writing this book the authors have focused exclusively on the vast majority of chemical engineering students who need a basic understanding of practical process control for their industrial careers Traditionally process control has been taught using non intuitive and highly mathematical techniques Laplace and frequency domain techniques Aside from being difficult to master in a one semester course the traditional approach is of limited use for more complex process control problems encountered in the chemical processing industries When designing and analyzing multi loop control systems today industry practitioners employ both steady state and dynamic simulation based methodologies These real time methods have now all but replaced the traditional approach A Real Time Approach to Process Control provides the student with both a theoretical and practical introduction to this increasingly important approach Assuming no prior knowledge of the subject this text introduces all of the applied fundamentals of process control from instrumentation to process dynamics PID loops and tuning to distillation multi loop and plant wide control In addition students come away with a working knowledge of the three most popular dynamic simulation packages The text carefully balances theory and practice by offering students readings and lecture materials along with hands on workshops that provide a virtual process on which to experiment and from which to learn modern real time control strategy development Features The first and only textbook to use a completely real time approach Gives students the opportunity to understand and use HYSYS software Carefully designed workshops tutorials have been included to allow students to practice and apply the theory Includes many worked examples and student problems VISIT THE AUTHORS WEBSITE www.ench.ualgary.ca/realtime **Principles and Practice of Automatic Process Control** Richard G. Svrcek,Donald P. Mahoney,Brent R. Young,2013-03-15 A Real Time Approach to Process Control provides the reader with both a theoretical and practical introduction to this increasingly important approach Assuming no prior knowledge of the subject this text introduces all of the applied fundamentals of process control from instrumentation to process dynamics PID loops and tuning to distillation multi loop and plant wide control In addition readers come away with a working knowledge of the three most popular dynamic simulation packages The text carefully balances theory and practice by offering readings and lecture materials

along with hands on workshops that provide a virtual process on which to experiment and from which to learn modern real time control strategy development As well as a general updating of the book specific changes include A new section on boiler control in the chapter on common control loops A major rewrite of the chapters on distillation column control and multiple single loop control schemes The addition of new figures throughout the text Workshop instructions will be altered to suit the latest versions of HYSYS ASPEN and DYNsim simulation software A new solutions manual for the workshop problems
