Nuclear Genome Stability: DNA Replication, Telomere Maintenance, and DNA Repair Maria Isabel Nogueira Cano, Richard McCulloch, Marcelo Santos Da Silva, 2022-03-09      **Clustering Phenomena in Atoms and Nuclei** Marten Brenner, Tom Lönnroth, F. Bary Malik, 2013-06-29

In these days of specialization it is important to bring together physicists working in diverse areas to exchange and share their ideas and excitement. This leads to cross fertilization of ideas and it enriches as in biological systems a specialized field with new strength development and direction derived from another area. Although this might be an uncommon thing it is an important step in our understanding of the physical world around us which is after all the main purpose of physics. The seed for this conference was really sowed when one of us MB and Mr Mang rd showed some scattering data at backward angles to FBM one summer about four years ago. That occasion led to a long research collaboration between the Abo Akademi physicists and other scientists in several countries. The actual idea to explore the possibility of holding a conference however crystallized in the summer of 1989 during a visit of FBM to Abo Akademi. The final decision to organize a conference was made after MB visited Professor Ben Mottelson in Copenhagen and Professor Anagnostatos in Athens. At this point it was recognized that there are similarities as well as differences between clustering phenomena in nuclei and systems consisting of atoms. It was therefore conjectured that it could be very stimulating to bring together these groups to exchange their ideas and to learn from each other's fields. A conference along these lines we hoped would contribute to an increased mutual understanding.

Antimicrobial Resistance in Bacteria from Livestock and Companion Animals Stefan Schwarz, Lina Maria Cavaco, Jianzhong Shen, 2018-10-01

This book constitutes selected papers from the 18th European Mediterranean and Middle Eastern Conference EMCIS 2021 which took place during December 8-9 2021. The conference was initially planned to take place in Dubai UAE but had to change to an online event due to the COVID 19 pandemic. EMCIS covers technical organizational business and social issues in the application of information technology and is dedicated to the definition and establishment of Information Systems IS as a discipline of high impact for IS professionals and practitioners. It focuses on approaches that facilitate the identification of innovative research of significant relevance to the IS discipline following sound research methodologies that lead to results of measurable impact. The 54 full papers presented in this volume were carefully reviewed and selected from a total of 155 submissions. They were organized in topical

Ross, 2024-10-18 For centuries research has been conducted on the therapeutics of Brassicaceae plants and their health promoting effects Cato the Elder 234 149 BCE documented their properties in his work *De agri cultura* and recommended using cabbage to compress wounds swelling burns and bone dislocations For arthritis he recommended chopped raw cabbage mixed with coriander and cured cabbage mixed with vinegar and honey In a groundbreaking discovery in the 1990s scientists at Johns Hopkins University isolated sulforaphane from broccoli revealing its potent anticancer properties This naturally occurring compound has proven highly effective safe and tolerable and holds immense promise as a chemoprevention agent It has the potential to combat various cancers including breast prostate gastrointestinal melanoma lung brain and bladder But its potential does not stop there It also shows promise in treating cardiovascular and neurodegenerative diseases and diabetes offering hope for those affected The cancer protecting properties of Brassica plants are mediated through compounds that induce a variety of physiological processes including antioxidant action detoxifying enzymes inducing apoptosis and cell cycle regulation Glucosinolate breakdown products can affect several stages of cancer development including the inhibition of activation enzymes phase I and the induction of detoxification enzymes phase II Isothiocyanates and indole products formed from glucosinolates regulate cancer cell development by regulating target enzymes controlling apoptosis inhibiting angiogenesis metastasis and the migration of cancer cells and blocking the cell cycle Sulforaphane found in abundance in broccoli sprouts plays a crucial role in upregulating the transcriptional activity of specific genes and restoring epigenetic alterations This is particularly significant as it modifies epigenetic pathways by targeting histone deacetylases and DNA methyltransferases These modifications in turn alter gene transcription and expression particularly in the case of cancers This intricate process of gene regulation is a fascinating study area making broccoli sprouts a compelling component of the epigenetic diet Sulforaphane induces the cytoprotective enzyme NQO1 The inducible expression of NQO1 is regulated principally through the Keap1 Nrf2 ARE signaling pathway The activation of the Nrf2 Keap1 signaling pathway heralds the beneficial actions of drugs known to affect Nrf2 signaling such as dimethyl fumarate an FDA approved treatment for multiple sclerosis and bardoxolone methyl for chronic kidney disease There is optimism that the overall strategies are moving forward Sulforaphane rich broccoli sprout extracts provide one avenue toward this end

**Mental Imagery in Clinical Disorders** David G. Pearson, Julie Krans, 2017-08-29 Mental imagery refers to the mental simulation or recreation of perceptual experience across different sensory modalities The exploration of mental imagery represents a new and important area within clinical psychology but

arguably one still in its infancy While mental imagery has featured prominently in recent theoretical accounts of disorders as diverse as post traumatic stress disorder phobia body dysmorphic disorder mood disorders and psychosis there remains an insufficiently strong theoretical and methodological foundation to enable comparison of the role of imagery across such different disorders The current research topic presents a diverse range of cutting edge papers focusing on investigating the underlying mechanisms and or treatment interventions associated with mental imagery in clinical disorders with the goal of helping establish those common elements most clinically relevant when investigating mental imagery The research topic comprises fifteen articles drawn from the fields of psychiatry psychology and neuroscience This is a unique collection of articles that combine different perspectives from the field of clinical psychology with more diverse perspectives drawn from the wider literature on mental imagery The original research studies and theoretical articles presented are organised around four main chapters that cover imagery and eye movements imagery and craving imagery and autobiographical memory and imagery and clinical disorders We believe that the range of submissions presented in the research topic make a strong contribution to helping establish a theoretical and methodological foundation that can enable the effective study of imagery across different disorders and domains
