context the exploitation of domain specific structural information is a driving issue in advancing practical AD tool and algorithm development This trend is prominently reflected in many of the publications in this volume not only in a better understanding of the interplay of AD and certain mathematical paradigms but in particular in the use of hierarchical AD approaches that judiciously employ general AD techniques in application specific algorithmic harnesses In this context the understanding of structures such as sparsity of derivatives or generalizations of this concept like scarcity plays a critical role in particular for higher derivative computations
