by Stefan

The word *ladder* originates either from the word *Programmable Logic Controller* or *Logic Ladder* (abbreviated to *PLC*). The first edition of the book was published in 1984, which explains why the word *controller* was present in the title. "Technological advances in recent years have resulted in the development of the programmable logic controller (PLC) and a corresponding evolution of ladder programming." This means the ladder program has to drive the PLC rather than a PLC.

The idea of the book is something of a mixture between an electrical engineer's way of thinking and a programmer's logic controller and aims to lead the reader of previous experience to the PLC's world with programmable logic controllers. It addresses the problem of different programming control systems being used in different environments and provides a way for describing the principal structure and illustrating that with examples from a range of controllers.

In some the reader is showing the ability necessary to write programs for programmable logic controllers, some useful strategies, difficulties, questions and problems are included in the book with answers on all matters. The questions and problems given at the end of the book.

Now, *Programmable Logic Controller* is now called as *PLC*, and so, in this book the terminology will be changed to include PLC. The word is simply "Programmable Logic Controller" based on something it should never be used as other things in the world. We can do further PLC's being used by engineers and other people. The book is intended to provide a way for describing the principal structure and illustrating that with examples from a range of controllers.
