Java Software Solutions Adrienne Bloss, N. Jane Ingram, 2002-11 *Introduction to Java and Software Design* Nell B. Dale, Chip Weems, Mark R. Headington, 2003 Introduction to Java and Software Design breaks the current paradigms for teaching Java and object oriented programming in a first year programming course The Dale author team has developed a unique way of teaching object oriented programming They foster sound object oriented design by teaching students how to brainstorm use filtering scenarios CRC cards and responsibility algorithms The authors also present functional design as a way of writing algorithms for the class responsibilities that are assigned in the object oriented design Click here for downloadable student files This book has been developed from the ground up to be a Java text rather than a Java translation of prior works The text uses real Java I O

classes and treats event handling as a fundamental control structure that is introduced right from the beginning The authors carefully guide the student through the process of declaring a reference variable instantiating an object and assigning it to the variable Students will gradually develop a complete and comprehensive understanding of what an object is how it works and what constitutes a well designed class interface *Start Concurrent* Barry Wittman,Aditya Mathur,Tim Korb,2013-12-31

C++ and Object-Oriented Numeric Computing for Scientists and Engineers Daoqi Yang, 2011-06-28 This book is intended to be an easy concise but rather complete introduction to the ISO ANSI C programming language with special emphasis on object oriented numeric computation for students and professionals in science and engineering The description of the language is platform independent Thus it applies to different operating systems such as UNIX Linux MacOS Windows and DOS as long as a standard C compiler is equipped The prerequisite of this book is elementary knowledge of calculus and linear algebra However this prerequisite is hardly necessary if this book is going to be used as a textbook for teaching C and all the sections on numeric methods are skipped Programming experience in an other language such as FORTRAN C Ada Pascal Maple or Matlab will certainly help but is not presumed All C features are introduced in an easy way through concepts such as functions complex numbers vectors matrices and integrals which are familiar to every student and professional in science and engineering In the final chapter advanced features that are not found in FORTRAN C Ada or Matlab are illustrated in the context of iterative algorithms for linear systems such as the preconditioned conjugate gradient CG method and generalized minimum residual GMRES method Knowledge of CG GMRES and preconditioning techniques is not presumed and they are explained in detail at the algorithmic level

Computing Fundamentals with Java Rick Mercer, 2002 Computing Fundamentals with Java is the current effort in the author's 11 year journey of integrating object oriented programming into the first computer science course while retaining the commonly accepted fundamentals of computing In addition to traditional topics and the newer objects and classes this text provides three bonus chapters on object oriented software development in the context of a case study This book is written to clearly present fundamental concepts to beginning programmers
