**Bioethics** MR Lewis Vaughn, 2019-07 *Bioethics Principles Issues and Cases* explores the philosophical medical social and legal aspects of key bioethical issues Opening with a thorough introduction to ethics bioethics and moral reasoning it then covers influential moral theories and the criteria for evaluating them Integrating eighty nine readings twelve of them new to this edition numerous classic bioethical cases and abundant pedagogical tools this text addresses the most provocative and controversial topics in bioethics What is especially appreciated by instructors and students is that in the main issues chapters chapters 3 11 Vaughn opens each chapter with a very substantive introduction to the issue before diving into the readings No other text provides the wide array of pedagogical features that help engage students and bring the material to life a variety of boxes that offer interesting facts legal issues etc sections on applying major theories lists of key terms chapter summaries and a variety of cases many of them real cases taken from the news and questions on those cases

*Autonomy and the Situated Self* Rachel Haliburton, 2013-11-26 *Bioethics* tells a heroic story about its origins and purpose The impetus for its contemporary development can be traced to concern about widespread paternalism in medicine mistreatment of research subjects used in medical experimentation and questions about the implication of technological developments in medical practice Bioethics then began as a defender of the interests of patients and the rights of research participants and understood itself to play an important role as a critic of powerful interests in medicine and medical practice *Autonomy and the Situated Self* argues that as bioethics has become successful it no longer clearly lives up to these founding ideals and it offers a critique of the way in which contemporary bioethics has been co-opted by the very institutions it once sought with good reason to criticize and transform In the process it has become mainstream moved from occupying the perspective of a critical outsider to enjoying the status of a respected insider whose primary role is to defend existing institutional arrangements and its own privileged position The mainstreaming of bioethics has resulted in its domestication it is at home in the institutions it would once have viewed with skepticism and a central part of practices it would once have challenged Contemporary bioethics is increasingly dominated by a conception of autonomy that detaches the value of choice from the value of the things chosen and the central role occupied by this conception makes it difficult for the bioethicist to make ethical judgments Consequently despite its very public successes contemporary bioethics is largely

failing to offer the ethical guidance it purports to be able to provide In addition to providing a critique this book offers an alternative framework that is designed to allow bioethicists to address the concerns that led to the creation of bioethics in the first place This alternative framework is oriented around a conception of autonomy that works within the ethical guidelines provided by a contemporary form of virtue ethics and which connects the value of autonomous choice to a conception of human flourishing

**Biolaw and Policy in the Twenty-First Century** Erick Valdés, Juan Alberto Lecaros, 2019-01-24 This book offers an impressive collection of contributions on the epistemology of international biolaw and its applications both in the legal and ethical fields Bringing together works by some of the world's most prominent experts on biolaw and bioethics it constitutes a paradigmatic text in its field In addition to exploring various ideologies and philosophies including European American and Mediterranean biolaw traditions it addresses controversial topics straight from today's headlines such as genetic editing the dual use dilemma and neurocognitive enhancement The book encourages readers to think objectively and impartially in order to resolve the ethical and juridical dilemmas that stem from biotechnological empowerment and biomedical techniques Accordingly it offers a valuable resource for courses on biolaw law bioethics and biomedical research as well as courses that discuss law and the biosciences at different professional levels e.g. in the courts biomedical industry pharmacological companies and the public space in general

**Justified Killing** Stephen Napier, 2026-03-18 This project argues that arguments for the permissibility of killing specifically arguments in favor of abortion and euthanasia fail to justify their conclusions At best these arguments form a merely coherent network but ultimately evince a circular pattern of justification This book traces the two principal arguments made in support of permissible abortion arguments based on a time relative interest account of wrongdoing and arguments based on the non personhood of what is killed It also addresses the principal arguments made in support of permissible euthanasia namely arguments based on the value of autonomy and compassion For each argument this book argues that it suffers from various defects The book thus concludes that arguments for abortion and euthanasia are unjustified
