

The background of the cover is a dark blue, almost black, scene of water at night. A bright, glowing path of light, possibly from a boat's wake or a series of reflections, curves from the bottom left towards the center of the image. The light is composed of many small, overlapping, oval shapes that create a sense of motion and depth. The overall mood is serene and mysterious.

Advanced Mathematical Methods for Scientists and Engineers I Carl M. Bender, Steven A. Orszag, 1999-10-29 A clear practical and self contained presentation of the methods of asymptotics and perturbation theory for obtaining approximate analytical solutions to differential and difference equations Aimed at teaching the most useful insights in approaching new problems the text avoids special methods and tricks that only work for particular problems Intended for graduates and advanced undergraduates it assumes only a limited familiarity with differential equations and complex variables The presentation begins with a review of differential and difference equations

then develops local asymptotic methods for such equations and explains perturbation and summation theory before concluding with an exposition of global asymptotic methods Emphasizing applications the discussion stresses care rather than rigor and relies on many well chosen examples to teach readers how an applied mathematician tackles problems There are 190 computer generated plots and tables comparing approximate and exact solutions over 600 problems of varying levels of difficulty and an appendix summarizing the properties of special functions *Partial Differential Equations for Scientists and Engineers* Stanley J. Farlow,1982 A clear presentation of the basic ideas of partial differential equations Discusses the important analytical tools of separation of variables and integral transforms Fifty semi independent lessons provide coverage of nonstandard topics such as Monte Carlo methods integral equations calculus of variations control theory potential theory and the method of Ritz and Galarkin Also includes sections on numerical analysis **Calculus for Scientists and Engineers** Martin Brokate,Pammy Manchanda,Abul Hasan Siddiqi,2019-08-03 This book presents the basic concepts of calculus and its relevance to real world problems covering the standard topics in their conventional order By focusing on applications it allows readers to view mathematics in a practical and relevant setting Organized into 12 chapters this book includes numerous interesting relevant and up to date applications that are drawn from the fields of business economics social and behavioural sciences life sciences physical sciences and other fields of general interest It also features MATLAB which is used to solve a number of problems The book is ideal as a first course in calculus for mathematics and engineering students It is also useful for students of other sciences who are interested in learning calculus **Solution Manual for Partial Differential Equations for Scientists and Engineers** Stanley J.
