A capital investment is defined as an outlay that is expected to result in benefits in the future. Capital budgeting is the process of selecting capital investments.

Capital budgeting is concerned with manager's decisions about capital expenditure or capital investments. It is about whether, when and how to spend money on capital projects, or in other words, it is about evaluating investment opportunities. Such decisions are important ones for the firms involved because other large sums of money are committed in an irreversible decision, with no certain knowledge of the future benefits.

The cornerstone of all investment appraisals is the weighing of benefits against costs for each individual project, so measuring its worthwhileness. If this measurement is done badly, it can hamper a firm's growth and employment prospects for years to come, and may lead to an inability to attract capital.

Financial institutions and individual investors provide private sector firms with capital in the expectation of a reasonable rate of return. If a firm invests that money in projects that do not yield a reasonable return then investors will be wary of that firm in the future. If the firm is a public sector organization, the appraisal of capital expenditure on projects is equally as important as appraisals done by private sector organizations. All organizations need to ensure, wherever possible, that in any

FINANCIAL MANAGEMENT Dr. B. N. Gupta 'Ravi', Subhash Gosavi, 2023-11-01 Buy Financial Management e Book for Mba 2nd Semester in English language specially designed for SPPU Savitribai Phule Pune University Maharashtra By Thakur publication      Transfer Pricing Aspects of Intra-Group Financing Raffaele Petruzzi, 2013-10-20 For corporate managers maximization of the profits and the market value of the firm is a prime objective The logical working out of this principle in

multinational enterprises has led to an intense focus on transfer pricing between related companies principally on account of the very attractive tax advantages made possible. Inevitably numerous countries have established transfer pricing legislation designed to combat the distortions and manipulations that are inherent in such transactions. This important book, one of the first in depth analysis of the current worldwide working of transfer pricing in intra group financing and its resonance in law, presents the relevant issues related to loans, financial guarantees and cash pooling, analyses an innovative possible approach to these issues and describes new methodologies that can be implemented in practice in order to make intra group financing more compliant with efficient corporate financing decisions and the generally accepted OECD arm's length principle. Comparing the tax measures implemented in the corporate tax law systems of forty countries, this study investigates such aspects of intra group financing as the following: corporate finance theories, studies and surveys regarding financing decisions; application of the arm's length principle to limit the deductibility of interest expenses; impact of the OECD's Base Erosion and Profit Shifting (BEPS) project; transfer pricing issues related to intra group financing; credit risk in corporate finance; rationales utilized by credit rating agencies; and the assessment of arm's length nature of intra group financing. The author describes ways in which the application of the arm's length principle can be strengthened and how the related risk of distortion and manipulation can be minimized. The solutions and methodologies proposed are applicable to any business sector. Given that determination of the arm's length nature of transactions between related companies is one of the most difficult tasks currently faced by taxpayers and tax administrations around the world, this thorough assessment and analysis will prove extraordinarily useful for in-house and advisory practitioners, corporate officers, academics, international organizations and government officials charged with finding effective responses to the serious issues raised. In addition to its well researched analysis, the book's comparative overview of how loans, financial guarantees and cash pooling are currently addressed by OECD Member States and by their national courts is of great practical value in business decision making.
