- Which one(s) are asked and how they phrased?
- Which are the important and how they phrased?

What are Physical Properties?

Start with the title in the chapter before you start to read the chapter. Focus on the various properties.

Physical properties are characteristics that can be observed without changing the identity of the substance. Mass and volume are observed as physical properties. For example, you can observe an object's color, shape, size, or weight. In general, the properties of an object are determined by the properties of the particles that compose it.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, the particular property is always the same.

LEARNING OBJECTIVE

Identify the physical and chemical properties of substances. Distinguish between physical and chemical properties of matter.
