Statistics for Criminal Justice and Criminology in Practice and Research Jack Fitzgerald, Jerry Fitzgerald, 2013-01-17
Statistics for Criminal Justice and Criminology in Practice and Research is an engaging and comprehensive introduction to the study of basic statistics for students pursuing careers as practitioners or researchers in both Criminal Justice and Criminology programs This student friendly text shows how to calculate a variety of descriptive and inferential statistics recognize which statistics are appropriate for particular data analysis situations and perform hypothesis tests using inferential statistics But it is much more than a cook book It encourages readers to think critically about the strengths and limitations of the statistics they are calculating as well as how they may be misapplied and misleading Examples of statistics and statistical analyses are drawn from the worlds of the practitioner as well as the policymaker and researcher Students will also gain a clear understanding of major ethical issues in conducting statistical analyses and reporting results as well as insight into the realities of the life of researchers and practitioners as they use statistics and statistical analyses in their day to day activities

Modern Mathematical Statistics with Applications Jay L. Devore, Kenneth N. Berk, 2011-12-07
Modern Mathematical Statistics with Applications Second Edition strikes a balance between mathematical foundations and statistical practice In keeping with the recommendation that every math student should study statistics and probability with an emphasis on data analysis accomplished authors Jay Devore and Kenneth Berk make statistical concepts and methods clear and relevant through careful explanations and a broad range of applications involving real data The main focus of the book is on presenting and illustrating methods of inferential statistics that are useful in research It begins with a chapter on descriptive statistics that immediately exposes the reader to real data The next six chapters develop the probability material that bridges the gap between descriptive and inferential statistics Point estimation inferences based on statistical intervals and hypothesis testing are then introduced in the next three chapters The remainder of the book explores the use of this methodology in a variety of more complex settings This edition includes a plethora of new exercises a number of which are similar to what would be encountered on the actuarial exams that cover probability and statistics Representative applications include investigating whether the average tip percentage in a particular restaurant exceeds the standard 15% considering whether the flavor and aroma of Champagne are affected by bottle temperature or type of pour modeling the relationship between college graduation rate and average SAT score and assessing the likelihood of O ring failure in space shuttle launches as related to launch temperature

Beatty,1995 *Statistics for the Behavioral Sciences* James Jaccard,1983 Now your students can become intelligent consumers of scientific research without being overwhelmed by the statistics Jaccard and Becker s text teaches students the basic skills for analyzing data and helps them become intelligent consumers of scientific information Praised for its real life applications the text tells students when to use a particular statistic why they should use it and how the statistic should be computed and interpreted Because many students given a set of data cannot determine where to begin in answering relevant research questions the authors explicate the issues involved in selecting a statistical test Each statistical technique is introduced by giving instances where the test is most typically applied followed by an interesting research example each example is taken from psychology literature
