International Aerospace Abstracts ,1991 **Canadian Journal of Physics** ,1985 **Encyclopedia of Geomagnetism and Paleomagnetism** David Gubbins, Emilio Herrero-Bervera, 2007-07-19 Understanding the process underlying the origin of Earth magnetic field is one of the greatest challenges left to classical Physics Geomagnetism being

the oldest Earth science studies the Earth's magnetic field in its broadest sense. The magnetic record left in rocks is studied in Paleomagnetism. Both fields have applications pure and applied in navigation, in the search for minerals and hydrocarbons, in dating rock sequences, and in unraveling past geologic movements such as plate motions. They have contributed to a better understanding of the Earth. Consisting of more than 300 articles written by ca. 200 leading experts, this authoritative reference encompasses the entire fields of Geomagnetism and Paleomagnetism in a single volume. It describes in fine detail, at an assessable level, the state of the current knowledge and provides an up-to-date synthesis of the most basic concepts. As such, it will be an indispensable working tool not only for geophysicists and geophysics students but also for geologists, physicists, atmospheric and environmental scientists, and engineers.

Geophysical Abstracts, 1979 Graduate Studies, 1977 **Variational Regularization for Systems of Inverse Problems** Richard Huber, 2019-02-14. Tikhonov regularization is a cornerstone technique in solving inverse problems with applications in countless scientific fields. Richard Huber discusses a multi-parameter Tikhonov approach for systems of inverse problems in order to take advantage of their specific structure. Such an approach allows to choose the regularization weights of each subproblem individually with respect to the corresponding noise levels and degrees of ill-posedness.

Knowledge Discovery in Big Data from Astronomy and Earth Observation. Astrogeoinformatics bridges the gap between astronomy and geoscience in the context of applications, techniques, and key principles of big data. Machine learning and parallel computing are increasingly becoming cross-disciplinary as the phenomena of Big Data is becoming commonplace. This book provides insight into the common workflows and data science tools used for big data in astronomy and geoscience. After establishing similarity in data gathering, pre-processing, and handling, the data science aspects are illustrated in the context of both fields. Software, hardware, and algorithms of big data are addressed. Finally, the book offers insight into the emerging science which combines data and expertise from both fields in studying the effect of the cosmos on the Earth and its inhabitants. Addresses both astronomy and geosciences in parallel from a big data perspective. Includes introductory information, key principles, applications, and the latest techniques. Well supported by computing and information science-oriented chapters to introduce the necessary knowledge in these fields.
