Information-Oriented Logic Zbigniew Plotnicki,2025-09-01 The book introduces a new form of mathematical logic called Information Oriented Logic IOL It demonstrates that IOL is capable of solving various classical and non classical logic problems that cannot be solved by traditional methods of logic In this book it is argued that two meaningful declarative sentences or symbols can make the same statement if they express the same thing or referent in different ways The book treats a piece of information as the referent for a meaningful declarative sentence thus inventing information oriented logic As a result this book provides a comprehensive guide to this logic Unlike traditional logic which uses declarative sentences as the result of logical expressions this new logic uses pieces of information The book is intended for undergraduate and graduate students as well as scholars applying mathematical logic to various fields such as philosophy linguistics ontology information theory computer science etc Additionally it provides a new mereology in which all implications of a piece of information are its parts *The Vertical Jump Secrets* T.B.
