
BYU Physics 121 Chapter 7 Conceptual Questions and answers 100% correct 2025

A farmhand carrying a 5 kg bucket of milk dashes 5 meters across a barnyard at a constant speed of 4 m/s. How much work was done on the bucket in that process? - correct answer ✓ There is no change in kinetic energy, so there is no work done on the bucket. The gravitational force is perpendicular to the displacement.

A book is moving to the right across a table at constant speed. There are four forces acting on it, its weight, W , which is straight down, the normal force of the table, N , which is straight up, and two applied forces, one, called F_1 , pointing 60° to the right of vertical and the other, F_2 , pointing 60° to the left of vertical. List each of these forces in the order of increasing work, i.e. first list the force which does the least work, then the second most, until you reach the one that does the most work. Two forces that do equal work should have an equal sign between them. Note that we are asking for the ranking to be done by the amount of work, not by the magnitude of the amount of work. - correct answer ✓ $F_2 < W = N < F_1$

A ball is falling through the air. It has just two forces acting on it, its weight and air resistance. Which of the following statements is true? - correct answer ✓ There are both conservative and nonconservative forces acting on the ball.

All of the following statements are true except one. Which one is false? - correct answer ✓ a. Work done by a conservative force only depends on the initial and final states.

b. One can never associate a potential energy function with a conservative force.

c. An example of a nonconservative force is friction.

Reynolds,2013-03-09 The motivation underlying our

development of a handbook of creativity was different from what usually is described by editors of other such volumes. Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference. Instead, this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program. See Brown Chapter 1. The handbook grew out of a series of discussions that spanned several years. At the heart of most of our interactions was a profound unhappiness with the state of research on creativity. Our consensus was that the number of good works published on creativity each year was small and growing smaller. Further, we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity. At the same time, we were casting about for a means of honoring a dear friend, E. Paul Torrance. Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views.

For a one semester course in liberal arts physics, Hobson has four unifying themes: How do we know the significance of post-Newtonian physics, modern physics, energy, and the social context of physics. These themes become evident in the writing and pedagogy throughout the fourth edition.

Fundamentals of Physics, Part 4, Chapters 34-38 David Halliday, Robert Resnick, Jearl Walker, 1996-08-16. Part 3 of the fifth edition of this introduction to physics. This text addresses the issue of building bridges of reason so that students may move from qualitative understanding of any given physics concept to making decisions about how to solve a problem involving that concept.
