

How Does Sound Travel?

We've heard things like breaking the sound barrier, or that sound travels at a certain speed. But what is sound? And how does it travel through space to reach our ears? This diagram's got the answer.

SOUND

1) Sound waves are longitudinal waves.

That means they move particles of a medium parallel to the direction they're traveling in.

2) Sound waves need a medium to travel through.

They cause particles of the medium to vibrate, and these vibrations travel, and that's what we hear.

3) The vibrations can travel through solids, liquids or gases.

The type of medium affects how fast and clearly the sound waves travel.

5) Does sound travel in space?

Sound can't travel in a vacuum (like outer space) because there are no particles to carry the vibrations.

4) The speed of sound depends on the medium it travels through.

When travelling through air, the speed of sound is about 330 metres per second (m/s).
