Any limitations placed on the data processing activities of the private sector will be found not in the Constitution but in federal or state law. With the exception of the Children's Online Privacy Protection Act of 1998, none of these laws specifically covers the collection of online personal information. The Commission issued a report to Congress in July 1999 on Self Regulation and Online Privacy and found that the vast majority of the sites surveyed collect personal information from consumers online and that the implementation of fair information practices is not widespread. The FTC issued a new report in May 2000 after another survey of web sites. Notwithstanding measurable gains since the 1999 report to Congress, a majority of the Commission found that self regulation alone without some legislation is unlikely to provide online consumers with the level of protection they seek and deserve and recommended that Congress consider legislation to complement self regulation.

Privacy and the Commercial Use of Personal Information Paul H. Rubin, Thomas M. Lenard, 2012-12-06 Hon. Orrin G. Hatch, United States Senate. Electronic commerce will be pivotal to the United States economy in the 21st Century. With the advent of electronic commerce, some consumers have become concerned about the disclosure, transfer, and sale of information which businesses have collected about them. These concerns purportedly are slowing the rate of expansion of electronic commerce, thereby putting at risk the future growth of the New Economy. To reduce this risk, a variety of schemes have been proposed under which the government would regulate online privacy. Congress currently is in the midst of a vigorous debate as to whether the government should regulate online privacy standards and if so, what form such regulation should take. This succinct yet powerful book by Paul Rubin and Thomas Lenard goes to the heart of these issues. It explains that there is no evidence of actual consumer harm or market failure that could justify burdensome government regulation of online privacy. It describes the tremendous advantages consumers currently receive from the free flow of information collected online, advantages which could be eliminated if the government unnecessarily regulates and stops this flow of information. It argues that the free market provides businesses with compelling incentives to adopt their own measures, such as seal programs and novel technologies, to assuage consumer privacy concerns. This book presents compelling evidence to support these and many other points central to the continuing debate in the halls of Congress and elsewhere concerning online privacy. **Online Privacy and Information Security** Kevin R. Erdman, William R. Bradley, National Business Institute, 2009 **Online Privacy and Business** Carla Mooney, 2014-08.
